Erratum to: “Modelling the Interplay Between Psychological Processes and Adverse, Stressful Contexts and Experiences in Pathways to Psychosis: An Experience Sampling Study” by Annelie Klippel et al. *Schizophr Bull.* 2017 Mar 1;43(2):302–315; doi:10.1093/schbul/sbw185.

The footnote of [Table 2](#) reporting differences of indirect effects across the three groups were included in the proof editing process at the bottom of [Table 3](#) and, vice versa, the footnote [Table 3](#) included at the bottom of [Table 2](#). The footnotes are shown at the bottom of the correct table below in bold. In addition, in [Table 3](#) (Path: event-related stress → negative affect → psychotic experiences) a confidence interval (0.033-0.014) was wrongly reported

– this should have read (0.003 – 0.014). This change is presented in bold in [Table 3](#). On page 308 of the paper, we state: “Further, there was evidence in FEP individuals and controls that some of the effects of activity-related and social stress were mediated via threat anticipation followed by negative affect and, then, PE.” Instead the sentence should read as follows: “Further, there was evidence in FEP individuals and controls that some of the effects of activity-related and social stress were mediated via negative affect followed by threat anticipation and, then, PE.”

The publisher regrets that the following errors occurred, yet the main findings of the study remain the same.
