Withdrawal: Nuclear factor erythroid 2-related factor 2 enhances carcinogenesis by suppressing apoptosis and promoting autophagy in nickel-transformed cells.

Young-Ok Son, Poyil Pratheeshkumar, Sasidharan Padmaja Divya, Zhuo Zhang, and Xianglin Shi

This article has been withdrawn by the authors. The image from NiT cells treated with Ni²⁺ was previously published in Fig. 5H of Son *et al.* ((2015) *J. Biol. Chem.* **290**, 27090–27100), representing different experimental conditions. The first two lanes of the GAPDH immunoblot from Fig. 3H were reused in Figs. 4A and 7A. The ki67 and H&E panels from normal tissue in Fig. 8I were reused from Fig. 7C of Son *et al.* ((2015) *J. Biol. Chem.* **290**, 27090–27100) without attribution.
