

CORRIGENDUM

Corrigendum to “Cost and Complications of Local Therapies for Early-Stage Breast Cancer” by Benjamin D. Smith et al. JNCI. J Natl Cancer Inst. Vol. 109, Issue 1, 2017. doi: 10.1093/jnci/djw178.

In the process of working on a subsequent manuscript, an error in the code written to define the MarketScan cohort was identified. Correcting this error has resulted in a lower total number of patients included in the MarketScan cohort, now $n = 40\,174$ compared to 44 344 in the original publication. The reduction in cohort size is primarily due to a lower number of patients treated with mastectomy alone, now $n = 6357$, compared to 11 432 in the original publication (see Table 1, revised).

To reflect these changes, the analyses in the manuscript for the MarketScan cohort have been revised. Figure 1A remains qualitatively similar to the original figure included in the published manuscript. The key finding presented in Table 2, specifically an excess risk of complications with mastectomy and reconstruction compared to lumpectomy and whole breast irradiation, remains essentially unchanged (relative risk [RR] = 1.79, 95% confidence interval [CI] = 1.75 to 1.83; $P <.001$). The only meaningful change to Table 2 is that treatment with mastectomy alone is no longer associated with a lower risk of any local treatment complication ($RR = 1.03$, 95% CI = 1.00 to 1.07; $P = .09$). Table 3 has been updated and key findings remain stable, for example the adjusted mean complication cost is \$9708 (95% CI = 8401 to 11 017) with mastectomy and reconstruction and \$1336 (95% CI = 1193 to 1479) with lumpectomy and whole breast irradiation. Figure 2A has been updated as well, with key findings qualitatively similar.

Table 1 (Revised). Baseline characteristics by local treatment strategy for the MarketScan cohort*

| Variable | Lump+WBI (n = 17 550) | | Lump + Brachy (n = 2414) | | Lump alone (n = 2229) | | Mast alone (n = 6357) | | Mast+Recon (n = 11 624) | |

*P value < .001 (chi-square) for all comparisons of treatment strategy by patient and treatment characteristics. Brachy = brachytherapy; HMO = Health Maintenance Organization; Lump = lumpectomy; Mast = mastectomy; WBI = whole breast irradiation.

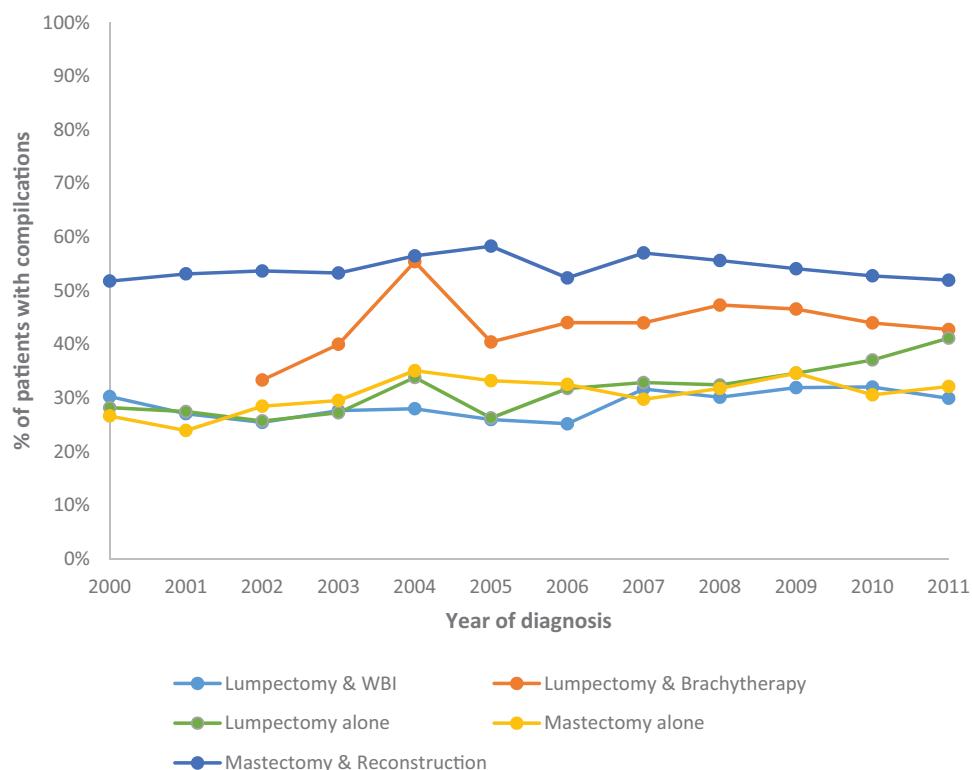

Figure 1A. Complications by year of diagnosis and local therapy (unadjusted) for the Marketscan cohort. Unadjusted time trends in risk of any complication by type of local therapy. Data for lumpectomy plus brachytherapy in 2000 and 2001 are not shown because of small numbers ($n=5$). WBI = whole breast irradiation.

Table 2. Logistic regression model for any local treatment complication*

| Variable | RR (95% CI) | P |
|----------------------|---------------------|-------|
| Local therapy | | |
| Lump+WBI | 1 (Ref) | |
| Lump+Brachy | 1.43 (1.38 to 1.49) | <.001 |
| Lump alone | 1.07 (1.01 to 1.14) | .01 |
| Mast alone | 1.03 (1.00 to 1.07) | .09 |
| Mast+Recon | 1.79 (1.75 to 1.83) | <.001 |
| Age, y | | |
| <40 | 1 (Ref) | |
| 40–49 | 1.02 (.96 to 1.09) | .42 |
| 50–59 | 1.03 (.97 to 1.08) | .37 |
| 60–64 | 1.04 (.98 to 1.10) | .24 |
| Comorbidity | | |
| 0 | 1 (Ref) | |
| 1 | 1.25 (1.20 to 1.30) | <.001 |
| 2 or higher | 1.37 (1.26 to 1.48) | <.001 |
| Chemotherapy | | |
| None | 1 (Ref) | |
| Without trastuzumab | 1.09 (1.06 to 1.12) | <.001 |
| With trastuzumab | 1.15 (1.09 to 1.21) | <.001 |

*No patients were excluded. RR = relative risk; CI = confidence interval; Brachy = brachytherapy; Lump = lumpectomy; Mast = mastectomy; Recon = reconstruction; WBI = whole breast irradiation. All P values were two-sided and calculated in the logistic regression models.

Table 3. Unadjusted and Adjusted 2-year Costs by Local Therapy Strategy, Diagnosis Years 2010-2011*

| Treatment | Unadjusted costs, \$ | | | | | | Adjusted costs, \$ | |
|-------------|------------------------|-------------------------|----------------------|------------------------|-------------------------|-------------------------------|------------------------|--|
| | Total | | Complication | | Noncomplication | | | |
| | Mean (95% CI) | Median (IQR) | Mean (95% CI) | Median (IQR) | Total Mean (95% CI) | Complication Mean (95% CI) | | |
| Lump+WBI | 77314 (75772 to 78856) | 60266 (41228 to 93905) | 1358 (1205 to 1511) | 75883 (74357 to 77401) | 59210 (40374 to 91950) | 68841 (67622 to 70061) | 1336 (1193 to 1479) | |
| Lump+Brachy | 72184 (68637 to 75732) | 60339 (39424 to 89279) | 1631 (1241 to 2021) | 70467 (66970 to 73963) | 58805 (38340 to 87453) | 80299 (76554 to 84045) | 1672 (1201 to 2142) | |
| Lump alone | 63860 (56672 to 71048) | 53996 (23384 to 86311) | 2493 (1676 to 3310) | 60183 (53012 to 67354) | 46983 (20166 to 81777) | 76313 (69803 to 82823) | 73595 (67368 to 79823) | |
| Mast alone | 62229 (58855 to 65602) | 40203 (21332 to 81796) | 2630 (1826 to 2434) | 59481 (56294 to 62668) | 38278 (20193 to 78658) | 52586 (50749 to 54423) | 2489 (1960 to 3018) | |
| Mast-Recon | 96010 (93569 to 98451) | 75725 (49456 to 117680) | 9552 (8759 to 10345) | 85956 (83687 to 88225) | 66404 (43117 to 105221) | 90386 (88925 to 93046) | 9708 (8401 to 11017) | |

*Adjusted costs are adjusted for the variables listed in Table 1. Each cost model was iteratively refined to remove covariates that did not statistically significantly contribute to the model. No patients were excluded from any calculation. All figures are reported in 2014 dollars. Brachy = brachytherapy; CI = confidence interval; Lump = lumpectomy; Mast = mastectomy; Recon = reconstruction; WBI = whole breast irradiation.

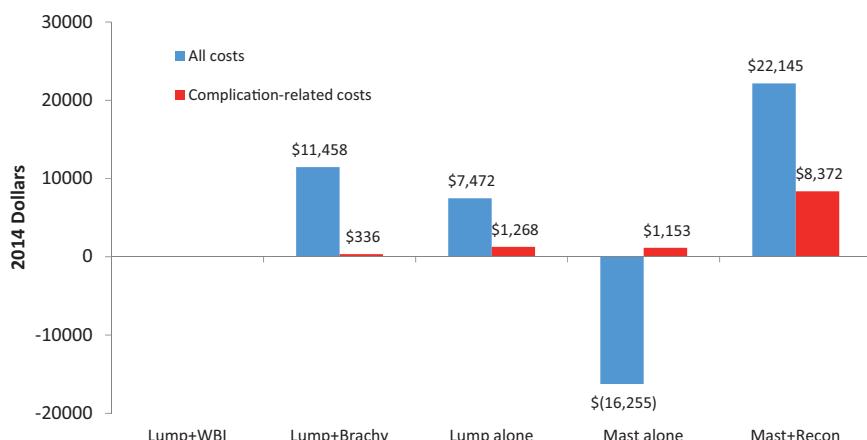

Figure 2A. Adjusted total and complication-related cost relative to lumpectomy and whole breast irradiation for patients diagnosed in 2010 and 2011. Adjusted difference in total cost and complication-related cost of local therapy options, relative to lumpectomy plus whole breast irradiation, for patients diagnosed in 2010 and 2011. Brachy = brachytherapy; Lump = lumpectomy; Mast = mastectomy; Recon = reconstruction; SEER = Surveillance, Epidemiology, and End Results; WBI = whole breast irradiation.
