Title: Comparison of Intelligibility Measures for Adults With Parkinson's Disease, Adults With Multiple Sclerosis, and Healthy Controls

Authors: Kaila L. Stipancic, Kris Tjaden, and Gregory Wilding

Journal of Speech, Language, and Hearing Research (2016), *59,* 230–238

https://doi.org/10.1044/2015_JSLHR-S-15-0271

In the originally published article, Figure 2 mistakenly listed the wrong axes labels. The labels should appear as "VAS Scaled Score" on the *y* axis and "Transcription Percent Correct Score" on the *x* axis. Please see the revised figure below.

We sincerely apologize for this error.

Figure 2. Percent correct transcription scores versus visual analog scale scores for each speaker in each condition (each point on the graph represents a single speaker in a given condition). Speaker group is designated by symbol shape, and condition is designated by symbol color. Control = circles, multiple sclerosis = squares, and Parkinson's disease = triangles.
