

## CORRIGENDUM

## Identification of Genes That Modulate Susceptibility to Formaldehyde and Imatinib by Functional Genomic Screening in Human Haploid KBM7 Cells

Hua Shen, Cliona M. McHale, Syed I. Haider, Cham Jung, Susie Zhang, Martyn T. Smith, and Luoping Zhang

doi: 10.1093/toxsci/kfw032

*Toxicological Sciences*, 151(1), 10–22, 2016

The authors failed to mention a close collaborator in the Acknowledgments section. The updated Acknowledgments section is given below.

“We are grateful to Prof. Christopher Vulpe, an expert in functional genomic screening at the Department of Physiological Science, University of Florida, for scientific discussion with human haploid screening optimization and

validation experiments, Dr. Daniel P. Blanchard, Department of Molecular and Cellular Biology, University of California, Berkeley, for assistance with cloning shRNA and Western blotting, and to Dr. Xuefeng Ren, Department of Epidemiology and Environmental Health, University of Buffalo, New York for assistance with initiating this KBM7 study as a postdoc at Berkeley.”
