

In a forthcoming supplement of the *Journal*, in the article by Younan et al (“Role of transmembrane protein 16F in the incorporation of phosphatidylserine into budding Ebola virus virions. *J Infect Dis*. doi: 10.1093/infdis/jiy485), Supplementary Figure 1C is incorrect; the correct version of Supplementary Figure 1 is shown below. In the penultimate sentence of the subsection “PtdSer Exposure During EBOV

Infection: Dependence on TMEM16F,” the second figure call-out should be “Figure 1D” (not “Figure 1E”). At the end of the subsection “EBOV Infectivity Reduced by Disabling of TMEM16F,” the following sentence should be added: “The observation was further supported by flow cytometry findings (Supplementary Figure 1D).”

The authors regret these errors.
