

CORRECTION

Correction: A new aging measure captures morbidity and mortality risk across diverse subpopulations from NHANES IV: A cohort study

Zuyun Liu, Pei-Lun Kuo, Steve Horvath, Eileen Crimmins, Luigi Ferrucci, Morgan Levine

The equation in the subsection of the Methods section titled “Phenotypic Age” is missing a step which makes it impossible to resolve. The equation should read:

$$\text{Phenotypic Age} = 141.50 + \frac{\ln[-0.00553 \times \ln(1 - M)]}{0.09165}$$

Where:

$$M = 1 - \exp\left(\frac{-1.51714 \times \exp(xb)}{0.0076927}\right)$$

and:

$$\begin{aligned} xb = & -19.907 - 0.0336 \times \text{Albumin} + 0.0095 \times \text{Creatinine} + 0.1953 \times \text{Glucose} \\ & + 0.0954 \times \ln(\text{CRP}) - 0.0120 \times \text{Lymphocyte Percent} \\ & + 0.0268 \times \text{Mean Cell Volume} + 0.3306 \times \text{Red Cell Distribution Width} \\ & + 0.00188 \times \text{Alkaline Phosphatase} + 0.0554 \times \text{White Blood Cell Count} \\ & + 0.0804 \times \text{Chronological Age} \end{aligned}$$
