In the article titled “Double-Blind, Randomized, Three-Armed, Placebo-Controlled, Clinical Investigation to Evaluate the Benefit and Tolerability of Two Dosages of IQP-AE-103 in Reducing Body Weight in Overweight and Moderately Obese Subjects” [1], there was an error in the

legend of Figure 3 that occurred during the production stage, as the color of the placebo results/bars has been replaced by the colors of the high dose results/bars and vice versa.

The correct version of Figure 3 should be as follows:

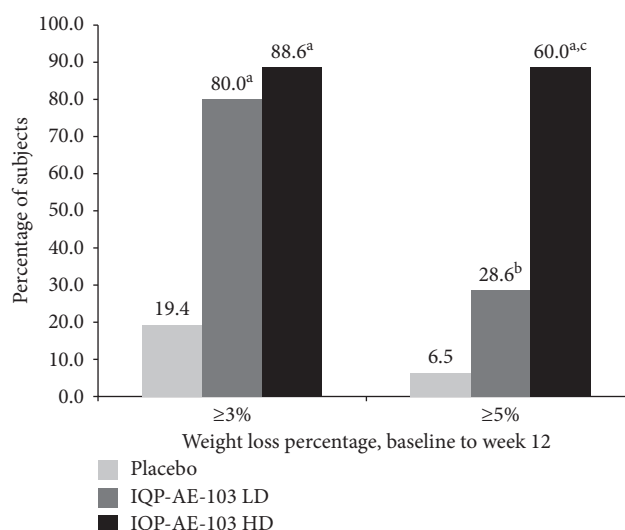

FIGURE 3: Responder rate for subjects who lost $\geq 3\%$ and $\geq 5\%$ of initial body weight at v6. LD = low dose; HD = high dose. ^a $p < 0.001$ vs. placebo; ^b $p = 0.026$ vs. placebo; ^c $p = 0.015$ vs. low-dose group.
