

**Correction:** The following should be added to the Figure 7 legend of the article “Role of Megakaryoblastic Acute Leukemia-1 in ERK 1/2-Dependent Stimulation of Serum Response Factor-Driven Transcription by BDNF or Increased Synaptic Activity” by Katarzyna Kalita, Giorgi Kharebava, Jing-Juan Zheng, and Michal Hetman, which appeared on pages 10020 – 10032 of the September 27, 2006 issue: The data presented in Figure 7 are from the same experiment in which we used the same input controls for SRF and MKL1 CHIPs. For clarity of presentation, SRF and MKL1 are presented separately. The input controls are duplicated in the right and left panels to make it easier for the reader to assess the specificity of the CHIP.
