We have been notified by the authors that there was an error in the second sentence of the paragraph headed ‘*Image analysis: segmentation*’ on p. 1394 of the above article. The term interobserver should have been intraobserver.

The correct sentence is as follows:

Manual segmentation of the synovial tissue layer was performed on these sagittal post-contrast knee images by a single observer (intraobserver ICC = 0.94), who assessed baseline and follow-up visit MR images paired, but blinded to order.

The authors would like to apologise for any inconvenience caused.
