Page: 1484

The authors inadvertently had an error in Eq. (1) on page EL219. The correct equation should be as follows:

$$AM(i, t) = |D \times \sin [0.03 \times i \times RD \\ \times \pi + RR \times \pi \times t + \varphi]| - D,$$

$$S(t) = \sum_{i=1}^{201} P_i(t) \times 10^{AM(i, t)/20}.$$

Note that the number of pure tones was also incorrectly stated by the authors in the original article. The correct number is 201.

A MATLAB script for generating the SMRT stimuli is provided as supplemental digital content.<sup>1</sup>

We would like to thank Josh Stohl for his help correcting the error in the equation and Roozbeh Soleymani for his help optimizing the code in the supplemental digital content.<sup>1</sup>

<sup>1</sup>See supplementary material at <https://doi.org/10.1121/1.5055218> for a matlab script for generating SMRT stimuli.
