In “Interventions in Live Poultry Markets for the Control of Avian Influenza: A Systematic Review and Meta-analysis” by Shi et al [*J Infect Dis* 2019; <https://doi.org/10.1093/infdis/jiz372>], there was an error in a grant number. In the

financial support section, this grant should read “Science Technology Demonstration Project for Emerging Infectious Diseases Control and Prevention (grant numbers BE2015714, BE2017749).”

In this article, (“Blood Gene Signatures of Chagas Cardiomyopathy With or Without Ventricular Dysfunction” *J Infect Dis*, Volume 215, Issue 3, 1 February 2017, Pages 387–395, <https://doi.org/10.1093/infdis/jiw540>) Figure 4 has an error. The labels for validation of microarray results, depicting qRT-PCR assays of

KIRD3S1 and PRF1 genes were inadvertently swapped. The correct KIR3DS1 and PRF1 qRT-PCR values are now depicted in the updated article online. This is in-line with Supplemental figure 1B, showing that KIR3DS1, and not PRF1, is the most discriminating gene between moderate and severe CCC.
