

Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.

COVID-19: Important Updates and Developments
Edited by Franco Rongioletti, MD, and

Addendum to: Eruption as a clinical manifestation of COVID-19: Photographs of a patient

We recently described a 26-year-old patient with presumptive coronavirus disease 2019 (COVID-19) who presented with a facial eruption that had a distinctly violaceous color typical of pernio.¹ We now report that, 2 months after the onset of signs and clinical manifestations, the patient underwent a COVID-19 antibody assay, and it was positive, thus confirming the presumptive clinical diagnosis of COVID-19.
