B. pseudolongum subsp. *pseudolongum* Mitsuoka (ATCC25526; <https://www.atcc.org/products/all/25526.aspx>) was incorrectly described as a human isolate. *B. pseudolongum* strain ATCC25526 is a swine isolate. The changes this necessitates are below.

In the section *Graft survival and histology* in Results, the last four sentences should be changed to the following: It is important to note that *B. pseudolongum* ATCC25526 is a swine isolate and not mouse adapted yet was active in this in vivo assay. It will be interesting in future investigations to use murine-adapted or -derived species.

In the final paragraph of Results, the fourth sentence should read as follows: As noted above, the *B. pseudolongum* ATCC25526 strain is swine derived and not murine adapted.

The authors regret the errors.
