In the article titled “Fibrinogen as a Prognostic Predictor in Pediatric Patients with Sepsis: A Database Study” [1], there was an error in the abstract where the following values (0.616 [95% CI: 0.457-0.829], $P = 0.001$; 1.397 [95% CI: 1.245-1.569], $P < 0.001$, respectively) should be corrected to (0.619 [95% CI: 0.435-0.880], $P = 0.008$; 1.274 [95% CI: 1.126-1.442], $P < 0.001$, respectively).

The author explained that the error was introduced during manuscript preparation and confirms that this does not affect the results and conclusions of the article.
