Published 6 February 2021

The systematic review erroneously reported that the study by Roffers *et al.* (Ref. 27) was conducted in the US while in fact it was conducted in El Salvador. Roffers *et al.* also would like to add that their subjects were classified into clinically relevant classes (Normotensive, Prehypertensive, Stage I hypertension, and Stage II hypertension), and that about 72% of their subjects were hypertensive.
