# Author Correction: Serum immunoglobulin free light chains and their association with clinical phenotypes, serology and activity in patients with IgG4-related disease

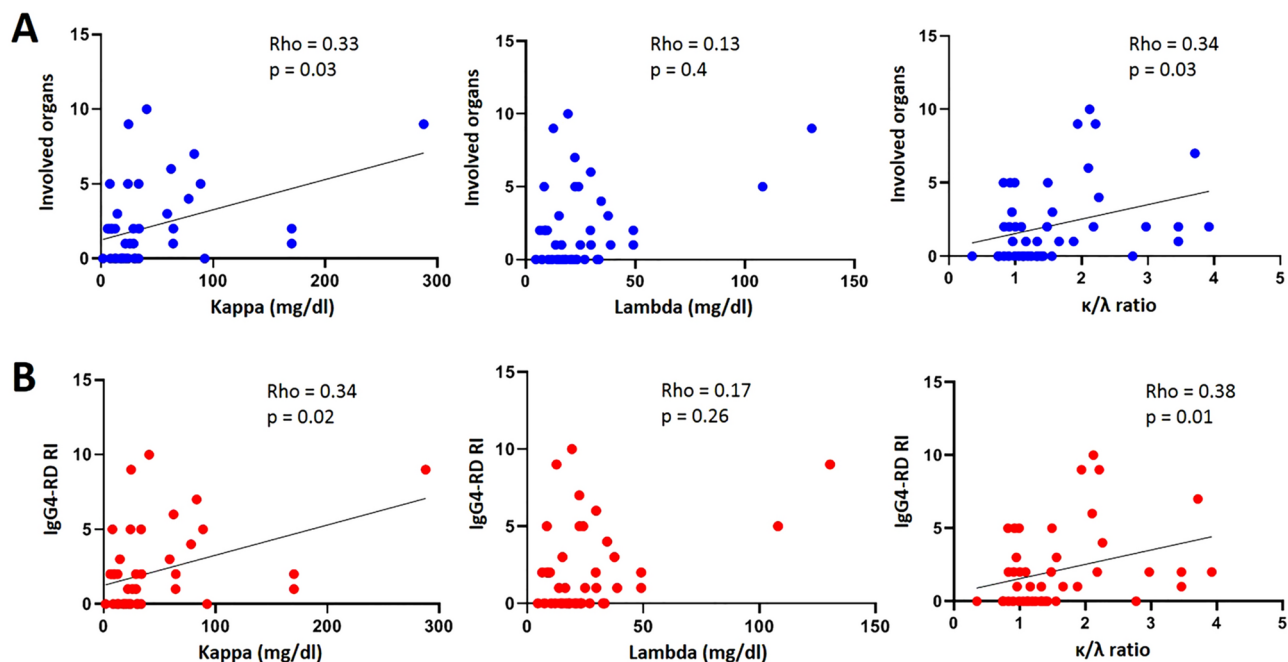

Eduardo Martín-Nares, Vanessa Saavedra-González, Reynerio Fagundo-Sierra, Blanca Estela Santinelli-Núñez, Teresa Romero-Maceda, Karla Calderón-Vasquez & Gabriela Hernandez-Molina

Correction to: *Scientific Reports* <https://doi.org/10.1038/s41598-021-81321-5>, published online 19 January 2021

The original version of this Article contained errors in Figure 4, where panel (b) was duplicated from panel (a). As a result, the red value dots in panel (b) and the y-axis labels were displayed incorrectly. The original Figure 4 and accompanying legend appear below.

The original Article has been corrected.

Published online: 01 June 2021

**Figure 4.** Relationship between  $\kappa$  and  $\lambda$  serum free light chains and the  $\kappa/\lambda$  ratio and clinical parameters in the IgG4-related disease patients ( $n = 45$ ). **(A)** Correlation between the number of involved organs and the levels of  $\kappa$  and  $\lambda$  serum free light chains and the  $\kappa/\lambda$  ratio. **(B)** Correlation between the IgG4-RD RI and the levels of  $\kappa$  and  $\lambda$  serum free light chains and the  $\kappa/\lambda$  ratio. All correlations were determined using Spearman's test. *IgG4-RD RI* IgG4-related disease responder index.
