In the article titled “Protective Effect of the HIF-1A Pro582Ser Polymorphism on Severe Diabetic Retinopathy” [1], the sentence “A total of 703 participated in the genetical analysis” in Section 2.1 should be corrected to “A total of 850 patients agreed and gave their informed consent before the enrolment in the study, and a total of 703 participated in the genetical analysis.”

The authors clarified that 850 patients were enrolled in the study, but blood samples for the genetic analysis were only available in 703 patients; therefore, the genetic association study was only performed on these 703 patients.
