In this article, we have noticed an error in the **Figure 6A**, Day 7. The photograph in the panel of Blank liposome was used incorrectly due to the careless use of Photoshop software when inserting the picture. Now, the correct **Figure 6** is provided.

## The effects of tanshinone IIA liposome on acute blunt muscle injury

**Figure 6.** A: Collagen I level in the muscle from each group by immunohistochemistry (IHC) (original magnification ×200; scale bar, 50  $\mu$ m), and the histograms of average optical density for collagen I by IHC in each group; B: The TNF- $\alpha$  expression in the muscle from each group by immunohistochemistry (IHC) (original magnification ×200; scale bar, 50  $\mu$ m), and the histograms of average optical density for collagen I by IHC in each group. Data are presented as mean ± standard error, n = 4 per group. \* represents a comparison with blank model group, P<0.05; # represents a comparison with tanshinone IIA group, P<0.05.
