摘要:目的 探讨人矮小同源盒基因2(SHOX2)对人膀胱癌细胞迁移、侵袭能力和干细胞特性的影响及其可能机制。方法 分析TCGA肿瘤数据库中SHOX2基因在膀胱癌标本和癌旁对照标本的表达情况,利用GEPIA网站对TCGA膀胱数据中的SHOX2基因表达量进行单因素生存分析,并利用GSEA软件预测其可能的生物学功能。选取对数生长期的人膀胱癌细胞T24,采用SHOX2 shRNA及SHOX2过表达质粒分别敲低、过表达SHOX2基因,用Western blot检测SHOX2蛋白表达量,通过划痕实验、Transwell侵袭实验检测细胞的迁移、侵袭能力,悬浮成球、克隆形成实验检测细胞的干细胞特性。在光镜下观察细胞形态变化,并用Western blot检测细胞上皮间充质转化(EMT)标志分子E-cadherin、Vimentin蛋白表达量的变化和TGF-β信号通路重要组件TβR-I蛋白表达量的变化。**结果**与癌旁膀胱组织相比,SHOX2基因在TCGA膀胱癌组织中表达升高($P=0.01$),在配对的膀胱癌组织中明显升高($P=0.001$),SHOX2基因表达与总生存率呈负相关($P=0.01$);GSEA显示SHOX2基因表达与EMT($P=0.002$, $P=0.03$)及干细胞特性($P=0.006$, $P=0.008$)呈正相关。在膀胱癌细胞T24中,两种不同的SHOX2 shRNA均能降低SHOX2的蛋白表达水平(shSHOX2-1, $P=0.004$;shSHOX2-2, $P=0.03$),SHOX2过表达质粒则能提高SHOX2的蛋白表达水平($P=0.007$)。划痕实验、Transwell侵袭实验结果显示,抑制SHOX2表达后膀胱癌细胞的迁移($P<0.001$, $P=0.02$)、侵袭($P=0.002$, $P=0.003$)能力明显降低,而SHOX2过表达则提高膀胱癌细胞的迁移($P<0.001$)、侵袭($P=0.004$)能力。悬浮成球、克隆形成实验结果显示,抑制SHOX2表达后明显减弱膀胱癌细胞的干细胞特性($P=0.002$, $P=0.007$, $P<0.001$);而SHOX2过表达则增强膀胱癌细胞的干细胞特性($P=0.002$, $P<0.001$)。此外,抑制SHOX2表达可使细胞发生上皮样形态改变,而SHOX2过表达可使细胞发生间充质样形态改变;Western blot结果显示,抑制SHOX2表达可使膀胱癌细胞中的E-cadherin蛋白表达水平升高($P<0.001$),Vimentin($P<0.001$, $P=0.01$)、TβR-I($P=0.03$, $P=0.02$)蛋白表达水平降低;而SHOX2过表达可使膀胱癌细胞中的Vimentin($P=0.04$)、TβR-I($P=0.003$)蛋白表达水平升高。**结论** SHOX2在膀胱癌中扮演致癌基因:SHOX2增强膀胱癌细胞的迁移、侵袭能力和干细胞特性,其作用机制可能与TGF-β信号通路参与调控的EMT有关。

Abstract: Objective To explore the role of human short stature homeobox 2 (SHOX2) in regulating the migration, invasion and stemness of human bladder cancer cells. **Methods** We analyzed SHOX2 gene expression in bladder cancer and adjacent tissues based on TCGA database. Univariate survival analysis of SHOX2 gene expression in TCGA-BLCA data was performed using GEPIA. The probable function of SHOX2 was predicted using GSEA. Human bladder cancer T24 cell models of SHOX2 knockdown or overexpression were assessed for changes in migration and invasion abilities using wound healing assay and Transwell assay, and their cancer stem cell-like characteristics were evaluated using tumorsphere formation assay and colony formation assay. Western blotting was used to detect the expressions of epithelial mesenchymal transition (EMT) markers E-cadherin and vimentin and the TGF-β signaling network component TβR-I in the cells. **Results** SHOX2 expression was significantly higher in bladder cancer tissues than in the adjacent tissues ($P<0.05$), especially in paired tissue specimens ($P<0.01$), and was negatively correlated with the overall survival of the patients ($P<0.05$). SHOX2 gene expression was correlated positively with EMT-related ($P<0.05$) and stemness-related gene signatures ($P<0.01$). In T24 cells, SHOX2 knockdown significantly suppressed cell migration and invasion, which was significantly enhanced by SHOX2 overexpression ($P<0.01$). The cancer stem cell-like characteristics of T24 cells was repressed by SHOX2 knockdown but significantly enhanced by SHOX2 overexpression ($P<0.01$). SHOX2 knockdown induced morphological changes of the cells into epithelioid cells, whereas SHOX2 overexpression induced a mesenchymal morphology of the cells. SHOX2 knockdown increased E-cadherin expression and decreased vimentin and TβR-I expression, while SHOX2 overexpression increased the expressions of vimentin and TβR-I in the cells. **Conclusion** SHOX2 promotes the migration, invasion and stemness of human bladder cancer cells possibly by regulating EMT via the TGF-β signaling pathway.

膀胱癌是泌尿系统第2常见的恶性肿瘤,已成为严重的公共卫生威胁之一^[1,2]。约25%的膀胱癌为肌层浸润性膀胱癌,约75%为非肌层浸润性膀胱癌^[3]。尽管非肌层浸润性膀胱癌可以通过经尿道膀胱肿瘤电切术等外科学方式进行治疗,但术后复发率高达70%,其中约

20%进展为肌层浸润性膀胱癌,最终导致远处转移,预后不良^[4]。因此,了解膀胱癌侵袭转移和复发的分子机制,探索新的治疗靶点极具临床意义和研究价值。

人矮小同源盒基因2(SHOX2)是人矮小同源盒基因的同源物^[5],主要参与脊椎动物胚胎形成期的转录调控^[6]。近年来,越来越多证据表明SHOX2在肿瘤的发生发展过程中扮演了重要角色。在肺癌中,SHOX2可以作为诊断和预后的生物标志物^[7-9];在食管鳞状细胞瘤、胃腺癌、口腔鳞状细胞癌中,SHOX2可以促进肿瘤侵袭转移^[10-12];在肝癌中,高表达的SHOX2与术后复发密切相关^[13]。然而,SHOX2在膀胱癌细胞中的生物学功能和作用机制目前国内外尚未见报道。因此,本研究分析了TCGA数据库中SHOX2基因在膀胱癌与癌旁膀胱组织中的表达差异及其对膀胱癌预后的影响,利用基因集富集分析GSEA软件对SHOX2的生物学功能进行预测,并通过功能缺失性及功能获得性实验,在细胞水平观察SHOX2对膀胱癌细胞迁移、侵袭能力和干细胞特性的影响。本研究探索SHOX2在膀胱癌细胞中对上皮间充质转化(EMT)的调控作用及其可能机制,为深入研究探讨膀胱癌侵袭转移和复发的机制提供重要的理论基础与实验依据。

3 讨论

SHOX2 最早在肺癌中被证实与肿瘤的发生发展有关, SHOX2 的表达量在肺癌早期即可发生变化, 多项研究表明 SHOX2 启动子甲基化可作为肺癌诊断和预后的生物标志物^[7-9]。有研究在原发性肝癌临床手术标本中对比分析 SHOX2 表达量和患者术后复发的关系, 发现 SHOX2 与肝癌的术后复发密切相关^[13]。近年来, 越来越多的证据表明 SHOX2 可以通过促进肿瘤的侵袭转移来影响肿瘤的预后^[10-12]。本研究通过分析 TCGA 膀胱癌标本数据, 发现 SHOX2 基因在膀胱癌组织中高表达, 并与膀胱癌患者临床预后不良密切相关, 这支持了 SHOX2 在膀胱癌中的致癌作用。同时, 我们通过对

TCGA数据库中膀胱癌样本进行GSEA富集分析,预测SHOX2可能的生物学功能。结果显示,SHOX2基因表达水平与上皮间充质转化(EMT)及肿瘤干细胞特性呈正相关。

为了进一步验证SHOX2在膀胱癌细胞中的生物学功能与作用机制,我们采用SHOX2 shRNA及SHOX2过表达质粒转染膀胱癌细胞T24,构建SHOX2敲低、过表达的稳定细胞株。划痕实验、Transwell侵袭实验结果显示,下调SHOX2的表达后,T24细胞的迁移、侵袭能力明显下降,而上调SHOX2的表达则显著增强T24细胞的迁移、侵袭能力,这表明SHOX2可以促进膀胱癌细胞的迁移及侵袭。EMT在肿瘤的侵袭转移中起关键作用^[14, 15]。EMT是指具有极性的上皮样细胞转化为运动能力较强的间充质样细胞,从而使细胞在细胞外基质中的移动能力增强^[16, 17],EMT对膀胱癌的侵袭转移起着极为重要的作用^[18, 19]。有研究证实了SHOX2在食管鳞状细胞癌细胞中可以促进EMT的发生^[10],本研究也发现,在膀胱癌细胞T24中抑制SHOX2的表达可使细胞呈现上皮样形态,且EMT标志分子E-cadherin蛋白表达水平升高、Vimentin蛋白表达水平降低;而过表达SHOX2可使T24细胞呈现间充质样形态,且Vimentin蛋白表达水平升高,说明SHOX2在膀胱癌细胞中可以促进EMT,这与我们的生物信息学分析结果一致。

肿瘤干细胞是指具有自我更新和多向分化潜能的肿瘤细胞亚群^[20, 21],干细胞特性的维持与膀胱癌的侵袭转移和复发密切相关^[22-24]。越来越多的证据表明,EMT过程可以使肿瘤干细胞富集,从而使肿瘤细胞的干细胞特性增强^[25, 26]。有研究发现,EMT也可以增强膀胱癌细胞的干细胞特性^[27, 28]。本研究通过悬浮成球实验和克隆形成实验,发现下调SHOX2的表达后,T24细胞的成球数和克隆形成数均下降,而上调SHOX2的表达则可显著增加T24细胞的成球数和克隆形成数,说明SHOX2确实可以在一定程度上增强膀胱癌细胞的干细胞特性,与生物信息学分析结果一致。

TGF-β信号通路在诱导肿瘤细胞EMT过程中起重要作用^[29-31],许多研究证明TGF-β信号通路可以促进膀胱癌细胞EMT^[32-33]。有研究发现SHOX2在乳腺癌细胞中可以通过调控TGF-β信号通路中的重要组件T β R-I来诱导EMT过程^[34]。本研究发现,在膀胱癌细胞T24中抑制SHOX2的表达可使T β R-I蛋白表达水平降低,而过表达SHOX2可使T24细胞中的T β R-I蛋白表达水平升高,说明SHOX2可能参与调控TGF-β信号通路。结合实验结果,本研究认为SHOX2可能通过激活TGF-β信号通路,参与调控EMT过程,进而增强膀胱癌细胞的迁移、侵袭能力和干细胞特性。

综上所述,本研究首先通过生物信息学分析,发现

SHOX2基因在膀胱癌组织中高表达且与膀胱癌患者临床预后不良相关,其生物学功能与EMT和肿瘤干细胞特性密切相关。通过功能缺失性及功能获得性实验证实SHOX2能增强膀胱癌细胞迁移、侵袭能力及肿瘤干细胞特性,其作用机制可能与TGF-β信号通路参与调控的EMT有关。这表明针对SHOX2靶点的基因治疗可能成为减少膀胱癌侵袭转移和复发的潜在治疗手段,但SHOX2是如何激活TGF-β信号通路,最终诱导膀胱癌细胞EMT,值得进一步研究。
