

Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.

The authors regret that in the original published article there are errors in the section describing the baseline survey. The baseline survey response rate for the Kentucky site was erroneously reported as 43.8 %, which was calculated based on 189 responses and a denominator of 432 individuals from information extracted from the study’s Participant Information Module (PIM). The PIM misidentified some individuals who were not actually invited to participate in the survey. The correct denominator for Kentucky was 326 individuals invited to participate,

resulting in a response rate for Kentucky of 58.0 %. This error also impacted the combined response rate across the four sites, which was erroneously reported as 31.9 %, with 1,055 responses from 3,309 individuals invited. The overall response rate should have been calculated with a denominator of 3,203. The correct overall response rate for the baseline survey, therefore, was 32.9 %.

These corrections do not impact the other papers in this Special Issue. The authors would like to apologise for any inconvenience caused.
