The originally published version of this paper showed an error in figure 1. The details for ‘atmosphere’ were originally given as 8800 PgC + 504 PgC, when they should have been 880 PgC + 5.4 PgC. The correct figure is shown below. This has also been corrected on the publisher’s website.

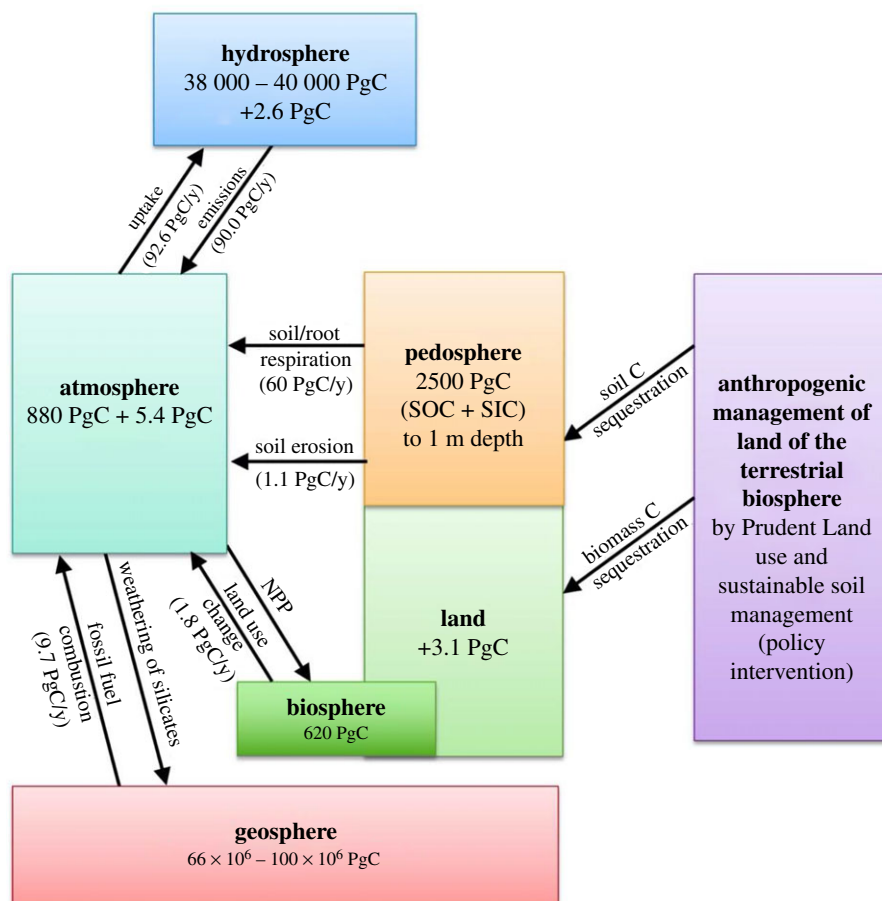

Figure 1. The role of soil and its management in moderating the global carbon cycle. The data on C stocks and fluxes are from [1–6].
