Evolution of Lymphadenopathy at PET/MRI after COVID-19 Vaccination

Kate Hanneman, Robert M. Iwanochko, Paaladinesh Thavendiranathan

**Erratum in:**

<https://doi.org/10.1148/radiol.2021219011>

The text contained an error and has been amended as follows: The first two **COVID-19 vaccines authorized for emergency use by the U.S. Food and Drug Administration** are highly immunogenic, with reports of ipsilateral axillary lymphadenopathy and FDG uptake after vaccination (1,2).
