

Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.

Correction

Immune responses following third COVID-19 vaccination are reduced in patients with hematological malignancies compared to patients with solid cancer

(Cancer Cell 40, 114–116; February 14, 2022)

In this report from the CAPTURE study (NCT03226886), we demonstrate that a third dose of COVID-19 vaccine boosts neutralizing antibody (NAb) and cellular responses in patients with cancer, including those that had undetectable NAb titers (NAbT) following two vaccine doses or for whom NAbT waned. We have noted that one key member of the CAPTURE consortium—Sanjay Popat—was inadvertently not included in the author list. We now include him as a co-author. There are no additional changes to the declaration of interests statement, since Dr. Popat declares no competing conflict of interest. This author list change is now reflected in the online version of this letter.
