

Corrections to Yaktine et al., Why the Derivation of Nutrient Reference Values Should be Harmonized and How it can be Accomplished. *Adv Nutr* 2020;11(5):1102–7.

“The factorial approach for calculating a nutrient requirement is described as the sum of total endogenous nutrient loss (endogenous fecal, urinary, integumental, seminal, menstrual) divided by its bioavailability or fractional absorption” is not intended to be included in the abstract.

We apologize for this error.
