Corrigendum

Corrigendum to: How organizational commitment influences nurses' intention to stay in nursing throughout their career International Journal of Nursing Studies Advances, 2 (2020), 100,007

Mary Bell ^{a,*}, Ann Sheridan ^b

^a *Our Lady's Hospice & Care Services, Dublin, Ireland*

^b *School of Nursing, Midwifery & Health Systems, University College Dublin, Ireland*

The authors regret the errors in [Tables 5](#) and [6](#) of our paper which have been corrected in the tables below.
In [Table 5](#):

- 1 The footnote has been changed to “*p* values in bold-statistical significance at level of $p < .05$ ”
- 2 The relationship between dependent children and ITSN (0.07) has had the bolding removed as it is not statistically significant.
- 3 The symbol ‘*n*’ representing the case numbers in a population has been changed to lower case and has had the bolding removed In column 1.
- 4 The subheading ‘Dependent Children’ has been bolded.

n	702			727			375			734		

P values in bold- Statistical significance at the level of $p < .05$.

In Table 6:

Table 6
Multiple Regression Analysis for variables predicting ITSN.

Variable	B	SE	β	p
Organisational Commitment	0.182	0.034	0.317	.000
Stress/Burnout	0.160	0.035	0.254	.000
Working Part-time	-1.10	0.916	0.056	.227
Job satisfaction 6	0.016	0.033	0.030	.618

$n = 346$, B = unstandardized regression coefficient, SE = standard error, β = standardized regression coefficient.

1 The third column presents the standardized regression coefficient results and has been corrected by placing the symbol β as the heading on that column.

The authors would like to apologize for any inconvenience caused.
