Author Correction: Computational methods for the characterization of *Apis mellifera* comb architecture

Christoph Bader, João Costa , Nic Lee , Rachel Smith, Ren Ri, James C. Weaver & Neri Oxman 

Correction to: *Communications Biology* <https://doi.org/10.1038/s42003-022-03328-6>, published online 16 May 2022.

In the original version of the Article, the second paragraph incorrectly stated “Comb cells are built at an average angle of 13 degrees from an interface where the basal sides of two cells meet¹², and it has been proposed that this angle helps better retain honey within the cell interiors.” The text should read, “Comb cells are built at an average angle of 13 degrees from an interface where the basal sides of two cells meet, and while it has been proposed that this angle helps better retain honey within the cell interiors, recent evidence suggest that it may also provide additional structural reinforcement for the growing comb¹².”

This has now been corrected in the PDF and HTML versions of the Article.
