

Expression of concern on ‘glucocorticoid-induced leucine zipper (GILZ)/NF- κ B interaction: role of GILZ homo-dimerization and C-terminal domain’

Nucleic Acids Research, Volume 35, Issue 2, 15 January 2007, Pages 517–528, <https://doi.org/10.1093/nar/gk11080>

The Editors were alerted in June 2022 about potential issues with Figure 2B. Specifically the GILZ and LZ1 panels appear to be identical. As the research was conducted more than 15 years ago, the authors no longer have the original data.

The Editors are referring the matter to the institution where the research was conducted for investigation. In the interim, we advise readers to examine the details of this study with particular care.
