

**Figure S2. The flg22 peptide does not protect sweet orange leaves from Xc infection.** 'Natal', 'Pera' and 'Valencia' leaves were infiltrated with a water suspension of Xc ( $OD_{600nm} = 0.05$ ) in the presence or absence of the flg22 peptide at 70  $\mu$ M final concentration (areas surrounded by dashed lines). Canker symptoms were recorded 10 d after bacterial inoculation.
