NOTES: Figure plots the trends in quarterly probability of undergoing gender affirming surgery for California residents between 2005–2020. The solid line and circles represent the point estimates for each quarter and the blue shaded area represents the 95% CI. Visually, we note a trend break in 2013, coincident with the implementation of IGNA. This break was confirmed econometrically using the Quandt Likelihood Ratio test (F = 57.24, p < 0.001). assessing for the presence of breaks between 2005–2019.
