

**Supplementary Figure 2. Detection of adsorption of VWF on lymphoma cells.**

a. Pathological examination by immunostaining did not find the adsorption of VWF on lymphoma cells. Magnification,  $\times 200$  b. Immunohistochemistry of lymphoma cells of the lung tissue. The arrows indicate infiltrated lymphoma cells. The expressions of VWF were not detected in the lymphoma cells. Magnification,  $\times 400$  c. Endothelial cells of a bone marrow biopsy specimen, which was obtained from an unrelated patient with chronic myeloid leukemia in complete remission, serve as positive control. Arrowheads indicate the endothelial cells expressing VWF. Magnification,  $\times 400$
