

Supplementary Material

Fig. S1. Principal Component Analysis of clinical and clinicopathological parameters does not segregate the three studied groups (YTE, Remission and Control). The test included as parameters were complete blood count (CBC), serum biochemical profile, measurement of bile acids and basal cortisol concentrations, serum concentration of cTLI (canine trypsin-like- immunoreactivity), SpecPL (specific pancreatic lipase), and cobalamin. Additionally, urinalysis for urine protein creatinine ratio (UPC) and urinary sediments.
