

Supplementary Figure S3

Supplementary Figure S3. USP36 interacts with DGCR8 and Drosha. (A). Knockdown of Drosha does not reduce USP36-DGCR8 binding. 293 cells transfected with Flag-USP36 together with scr control or Drosha siRNA pool were subjected to co-IP using anti-Flag antibody followed by IB. **(B)** Knockdown of DGCR8 does not reduce USP36-Drosha binding. 293 cells transfected with Flag-USP36 together with scr control or DGCR8 siRNA pool were subjected to co-IP using anti-Flag antibody followed by IB. The protein expression is shown in bottom panels.
