

Females

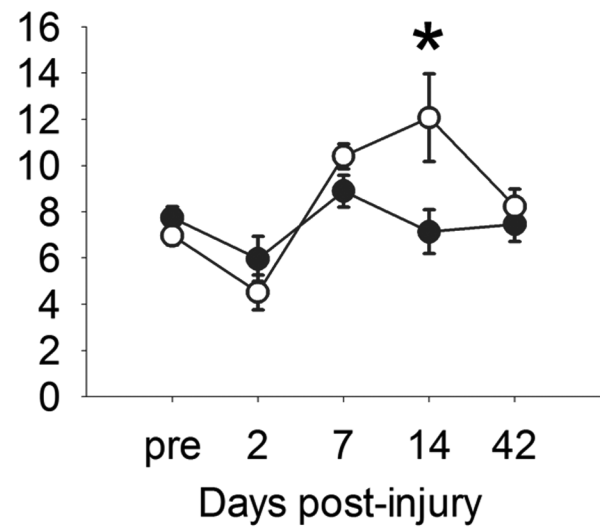

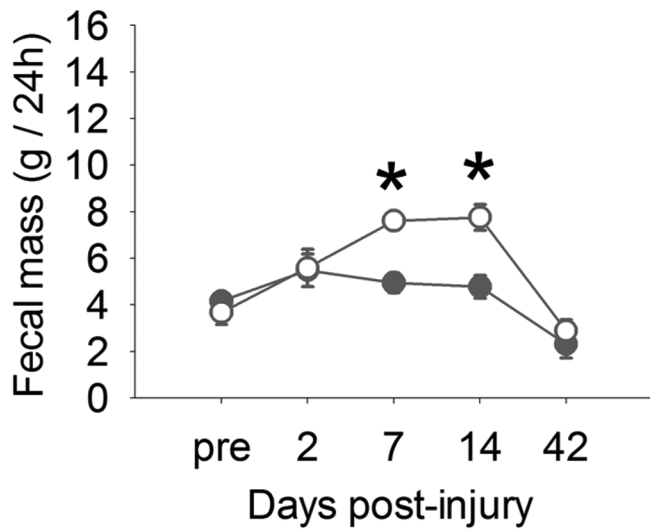

Pellet number

Males

Fecal mass

SUPPLEMENTARY FIG. S2. Female and male rats with spinal cord injury (SCI) show increased fecal output. Rats subjected to SCI increased daily fecal pellet release (females: at 2, 7, 14 days post-injury [dpi]; males: at 2, 7 dpi). In addition, daily fecal output wet mass was increased from SCI rats (females: at 7 and 14 dpi; males: at 14 dpi). * $p < 0.05$ for sham vs. SCI at that time-point.
