

Figure S1

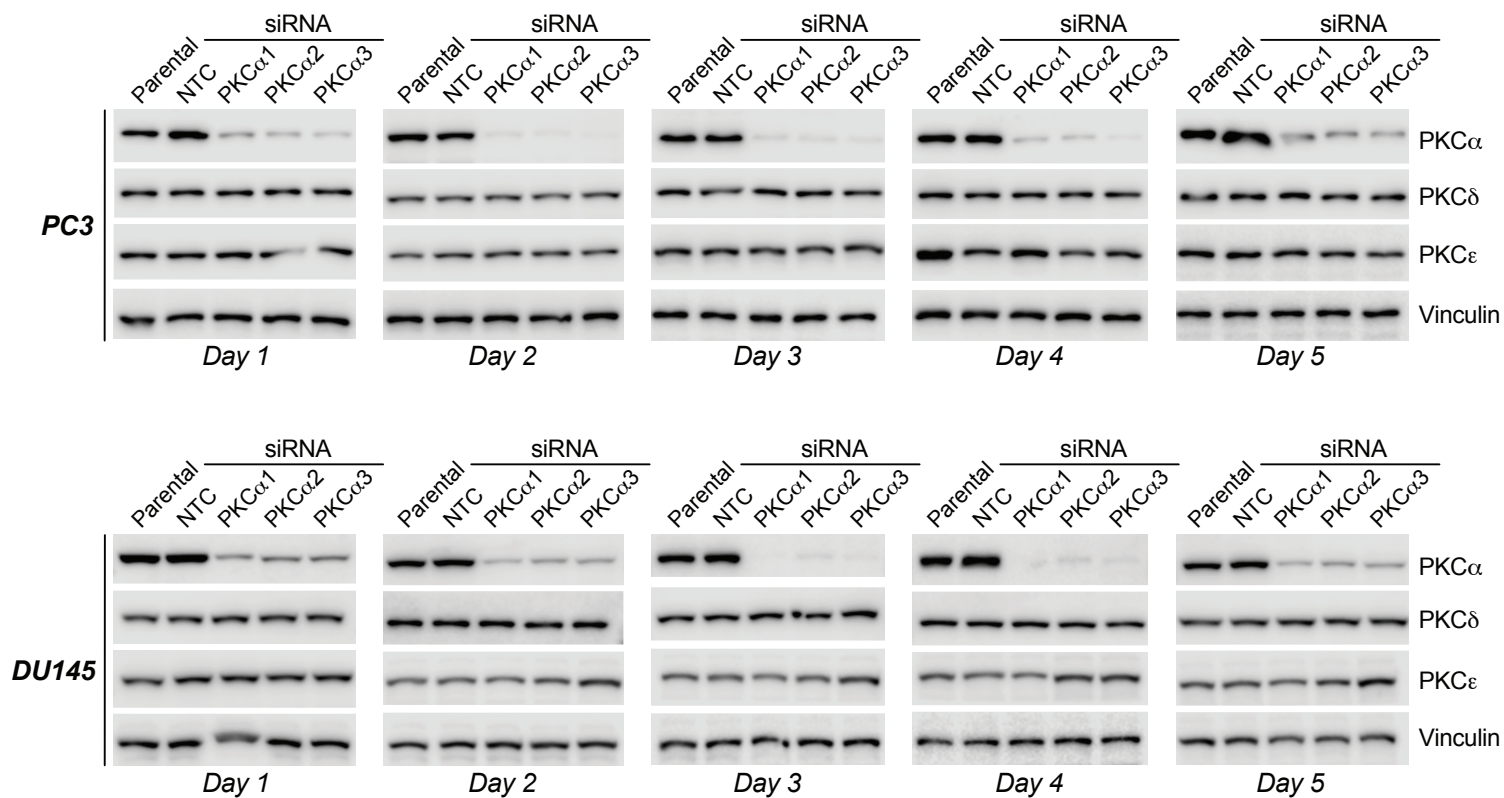

Figure S1

Time-dependent expression of PKC α in prostate cancer cells after RNAi silencing. PC3 or DU145 cells were transfected with three different PKC α siRNA duplexes (α 1, α 2 or α 3) or non-target control (*NTC*). Twenty-four h later cells were serum starved for 24 h, and PKC α expression was determined at different times (1-5 days).
