

Figure S6

Reduced production of cytokines in PC3 cells subjected to PKC α RNAi depletion. PC3 cells were transfected with PKC α ($\alpha 1$, $\alpha 2$) or non-target control (*NTC*) siRNA duplexes. After 48 h, medium was replaced, and conditioned medium (*CM*) was collected after 12 h (IL-8/CXCL8) or 24 h (GRO). Cytokines in the *CM* were determined by ELISA. *, $p < 0.05$ vs. *NTC*; ****, $p < 0.0001$ vs. *NTC*. **A**, Expression of PKC α by Western blot. **B**, Cytokine determination by ELISA. A representative experiment is shown, with data expressed as mean \pm S.D. ($n=4$). *P*, parental.
