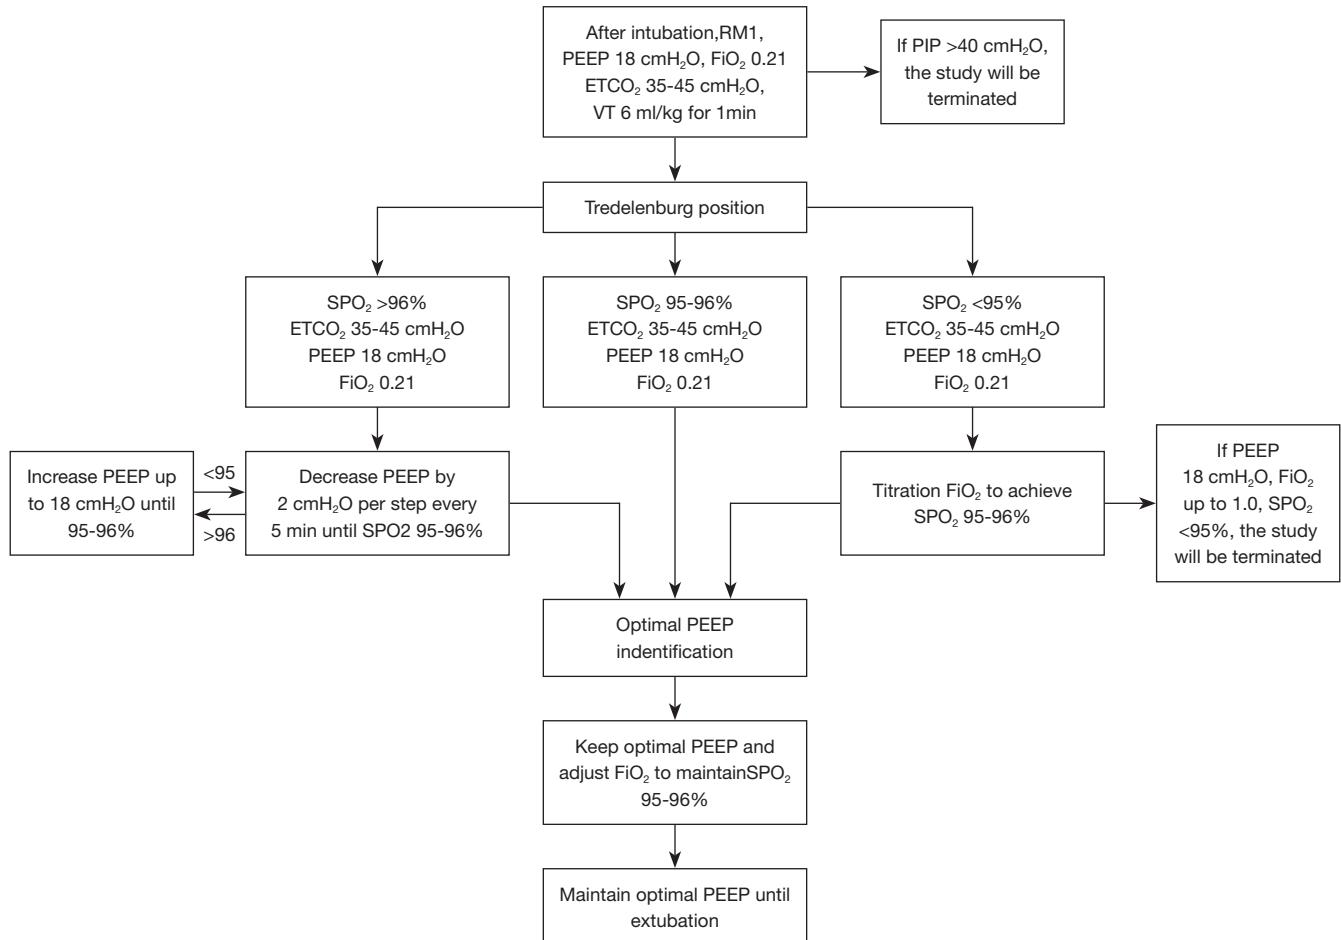

Figure S1 Titration process of optimal PEEP. RM, recruitment maneuver; PIP, peak inspiratory pressure; PEEP, positive end-expiratory pressure; ETCO₂, end-expiratory carbon dioxide partial pressure.

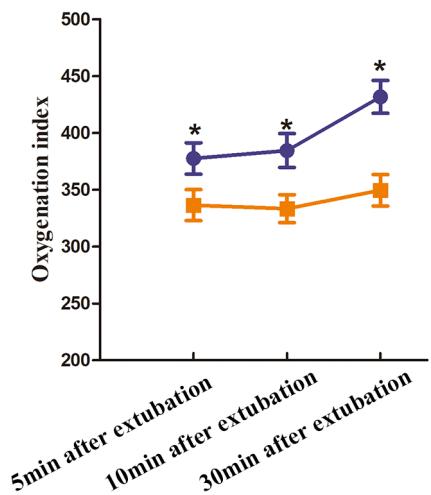

Figure S2 The $\text{PaO}_2/\text{FiO}_2$ at 3 different time points after extubation. The inspiratory oxygen fraction (FiO_2) with a nasal cannula after extubation was calculated as $0.21 + 4 \times \text{the oxygen flow rate}$ (37). Group C, control group with a fixed PEEP of 5 cmH_2O ; group O, optimized PEEP group with an individualized PEEP at which SpO_2 was maintained at 95–96% with minimal FiO_2 ; PEEP, positive end-expiratory pressure.
