

Supporting Information for

Guam ALS-PDC is a distinct double prion disorder featuring both tau and A β prions

Figures S1 to S3
Tables S1 to S3

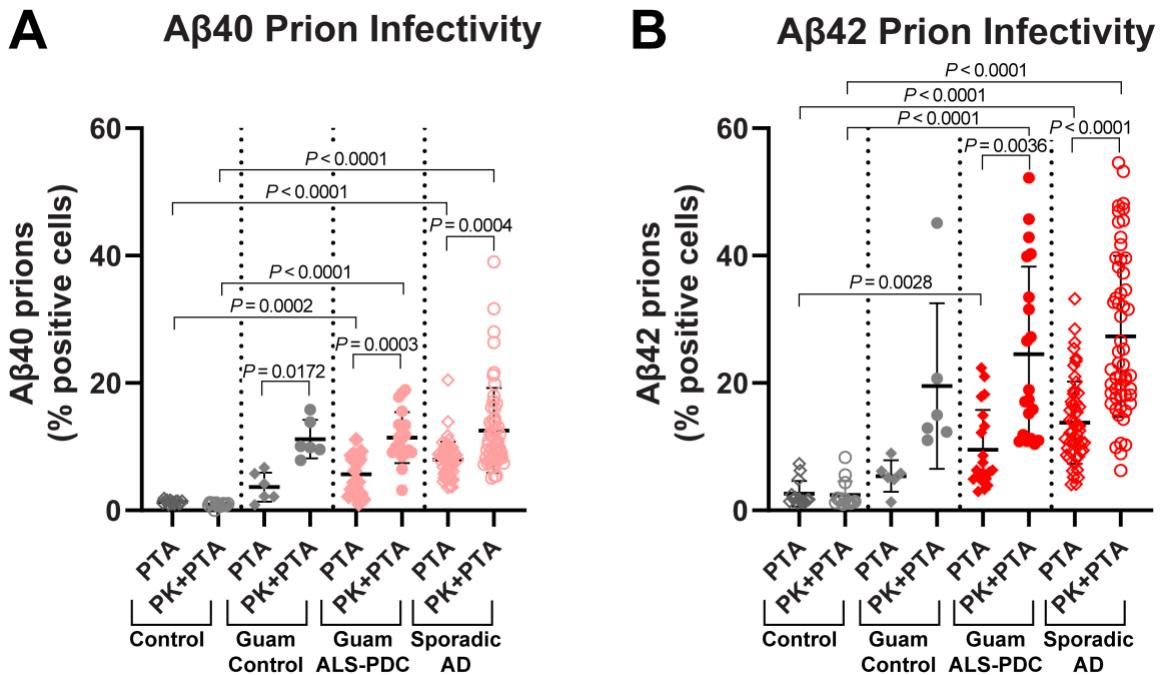

Fig. S1. Prion infectivity after limited digestion with proteinase K. Prion infectivity measurements using transfected HEK293T cells stably expressing the (A) YFP-A β 40 (pink) and (B) YFP-A β 42 (red) fusion proteins (see Methods). Brain-derived prions prepared by phosphotungstic acid (PTA) precipitation with (filled symbols) and without (open symbols) limited digestion by proteinase K (PK) were diluted [$\times 0.015$] prior to the lipofectamine-based transduction in recipient cell lines. Prion infectivity in the cells was quantified 2 and 3 d after the initial exposure to various prion preparations from sporadic AD (circles) or Guam ALS-PDC (triangles) donor brain extracts. Data shown are individual donor samples treated with and without PK as determined from four images per well in four wells per donor sample.

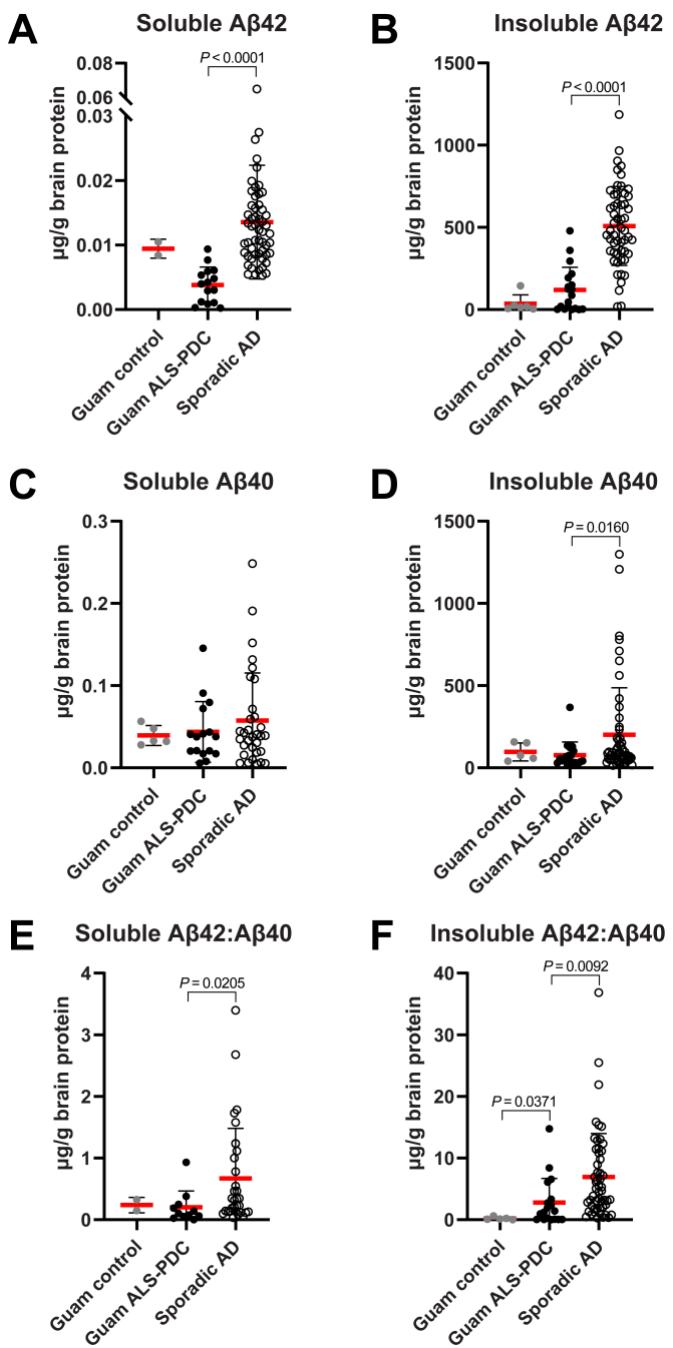

Fig. S2. Biochemical measurements of A β abundance in soluble and insoluble brain fractions. (A–F) ELISA was used to measure A β 42 and A β 40 proteins in soluble (PBS; clarified brain homogenate) and insoluble (formic acid solubilized) fractions prepared from frozen brain samples. (A and B) A β 42 in soluble and insoluble fractions. (C and D) A β 40 in soluble and insoluble fractions. (E and F) Ratio of A β 42 to A β 40 in soluble and insoluble fractions. The measurements were made in duplicate. Data shown are individual donors plotted with mean \pm SD.

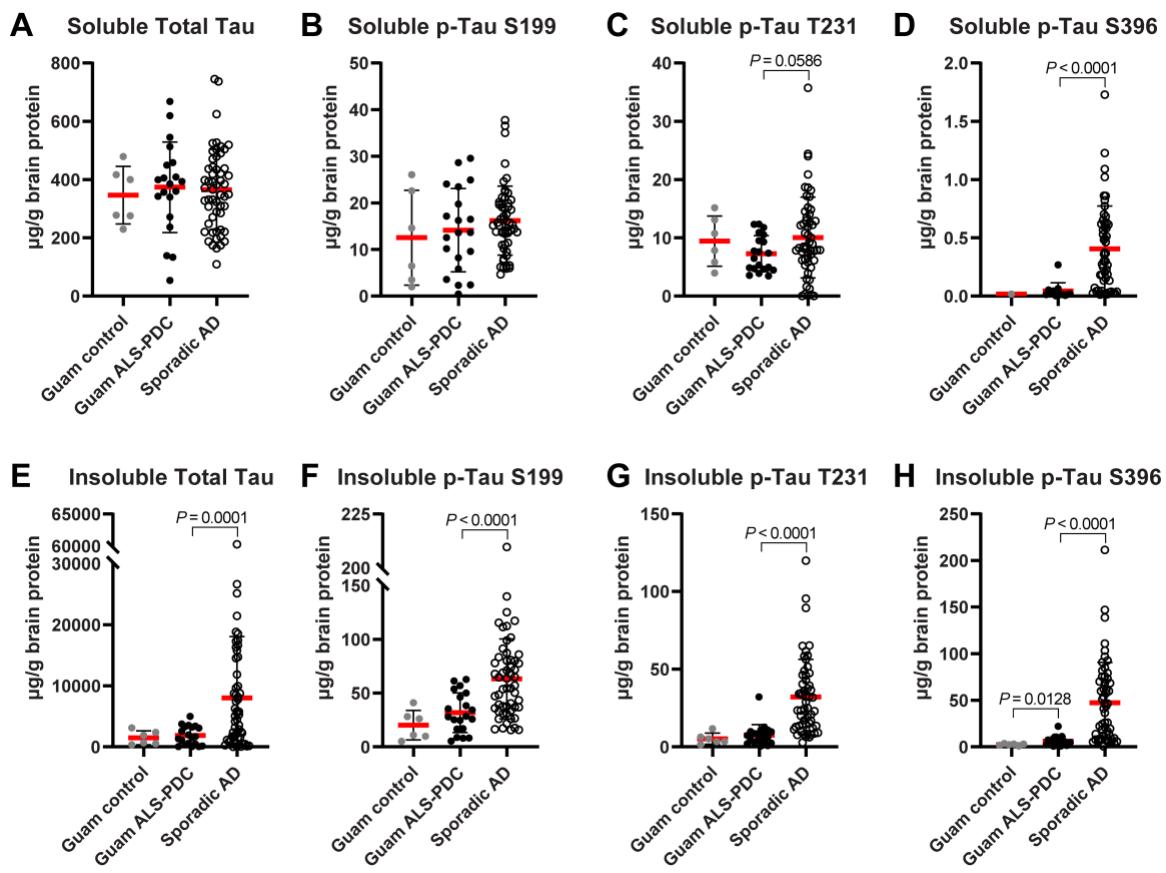

Fig. S3. Biochemical measurements of tau abundance in soluble and insoluble brain fractions. (A–H) ELISA was used to measure total tau, p-tau S199, p-tau T231, and p-tau S396 proteins in soluble (PBS; clarified brain homogenate) and insoluble (formic acid solubilized) fractions made from frozen brain samples. (A–D) Total tau, p-tau S199, p-tau T231, and p-tau S396 abundance in the soluble fraction. (E–H) Total tau, p-tau S199, p-tau T231, and p-tau S396 abundance in the insoluble fraction. The measurements were made in duplicate. Data shown are individual donors plotted with mean \pm SD.

Table S1. Source of postmortem human brain tissue samples from USUHS. Demographic and clinicopathological data for Guam ALS-PDC and control cases.

Cohort	Case P#	Sex	Age	Clinical Diagnosis/Cause of Death	Neuropathological Diagnosis	Comments
Guam ALS-PDC	98-005	F	79	PDC	PDC	Chamorro
Guam ALS-PDC	2000-10	F	65	PDC	PDC, recent cerebral + pons hemorrhage	Chamorro
Guam ALS-PDC	2002-04	M	73	PDC	PDC, Lewy body disease (lymbic)	Chamorro
Guam ALS-PDC	2003-04	F	89	PDC	-	Chamorro
Guam ALS-PDC	2004-003	M	83	PDC	-	Chamorro
Guam ALS-PDC	2004-004	M	81	PDC	-	Chamorro
Guam ALS-PDC	98-011	F	66	PDC	PDC	Chamorro
Guam ALS-PDC	2000-11	M	62	PDC	PDC	Chamorro
Guam ALS-PDC	2000-02	M	75	PDC + MID	PDC, MID, CVD	Chamorro
Guam ALS-PDC	2000-06	M	84	PDC	PDC, with added features of DCLB; widespread Lewy bodies	Chamorro
Guam ALS-PDC	98-18	M	72	PDC	Frontotemporal dementia + Parkinsonism	Filipino
Guam ALS-PDC	2000-13	M	67	PDC	PD, Lewy bodies in brain stem nuclei	Filipino
Guam ALS-PDC	99-001	F	73	PDC	PDC	Chamorro
Guam ALS-PDC	98-12	F	93	CVA, dementia - MID	MID, cerebral infarcts	Chamorro

Guam ALS-PDC	99-006	F	76	PDC	PDC (severe), possibly superimposed AD	Chamorro
Guam ALS-PDC	98-001	F	69	PDC	PDC	Chamorro
Guam ALS-PDC	2000-12	F	86	AD	AD	Chamorro
Guam ALS-PDC	98-006	F	86	AD	AD	Chamorro
Guam ALS-PDC	99-10	M	81	PDC	-	Chamorro
Guam ALS-PDC	99-007	F	74	PDC	PDC; CVD	Chamorro
Guam Control	2000-08	F	80	Control	SN degeneration without NFTs, rare NFT in brain	Chamorro
Guam Control	2002-08	M	78	Ca of colon, no neurologic dx	No significant pathology	Chamorro
Guam Control	2001-08	M	57	SP renal transplant; sepsis	No significant pathology	Filipino
Guam Control	2000-24	M	45	Ischemic heart dis. Control	-	Chamorro
Guam Control	97-006	M	71	Ca lung, control	No significant pathology	Chamorro
Guam Control	2003-08	F	80	COPD, ruptured aorta	No significant pathology	Chamorro
Control	Control 1	M	52	Hypertension, acute MI	No significant pathology	-
Control	Control 2	M	41	Cardiac arrest	No significant pathology	-
Control	Control 3	M	51	Cardiac arrest	No significant pathology	-
Control	Control 4	M	58	Acute MI	No significant pathology	-
Control	Control 5	M	35	Drowning	No significant pathology	-
Control	Control 6	M	27	Suicide (self-inflicted GSW)	No significant pathology	-
Control	Control 7	M	62	Cariac arrest	No significant pathology	-

Control	Control 8	M	37	Drug overdose, accidental	No significant pathology	-
Control	Control 9	M	67	Suicide (hanging)	No significant pathology	-
Control	Control 10	M	42	Hypertension, cardiac arrest	No significant pathology	-
Control	Control 11	M	44	Motor vehicle accident	No significant pathology	-
Control	Control 12	M	70	Coronary atherosclerosis, MI	No significant pathology	-
Control	Control 13	M	66	Atherosclerosis, chronic alcoholism, renal failure	No significant pathology	-
Control	Control 14	M	35	Chronic alcohol abuse, suicide (hanging)	No significant pathology	-

Abbreviations: AD, Alzheimer's disease; ALS-PDC, amyotrophic lateral sclerosis-parkinsonism dementia complex; Ca, cancer; COPD, chronic obstructive pulmonary disease; CVA, cerebrovascular accident; CVD, cerebrovascular disease; DCLB, diffuse large B-cell; DLBD, diffuse Lewy body disease; dis., disease; dx, diagnosis; GSW, gunshot wound; MI, myocardial infarction; MID, multi-infarct dementia; NFT, neurofibrillary tangles; PD, Parkinson's disease; SN, supranuclear; SP, senile plaque.
