

Supplementary Figure 2. Risk factors for [A] serious infections,^a [B] opportunistic infections,^a [C] malignancies [excluding NMSC],^b [D] NMSC,^b [E] MACE,^b [F] VTEs,^{a,c} and [G] GI perforations,^b by multivariable regression analysis [stepwise selection] in the Overall plus P3b/4 [2020] Cohort

Covariates were selected by multivariable regression analysis [stepwise selection].

^aIn total, 1157 patients in the Overall plus P3b/4 [2020] Cohort were included.

^bAdjudicated event; in total, 1124 patients in the Overall plus P3b/4 [2020] Cohort were included.

^cVTEs included adjudicated events from OCTAVE Open and RIVETING plus selected events from phase 2/3 studies from the Narrow Standardized MedDRA query for embolic and thrombotic events.

AE, adverse event; ANC, absolute neutrophil count; BMI, body mass index; CI, confidence interval;

GI, gastrointestinal; HDL, high-density lipoprotein; HR, hazard ratio; MACE, major adverse cardiovascular

events; MedDRA, Medical Dictionary for Regulatory Activities; NMSC, non-melanoma skin cancer;

TNFi, tumor necrosis factor inhibitor; VTE, venous thromboembolic event.
