

Supplementary Material

1 Supplementary Figures and Tables

1.1 Supplementary Figures

Supplementary Figure 1. Gene structures of the *TaSPL14* homoeologs. The blue rectangles represent exons, the lines between exons represent introns, and the number indicates the length of exons in base pairs.

Supplementary Figure 2. Heat map of expression profiles of *TaSPL14* homoeologs. The tissue expression data of *TaSPL14* homoeologs are obtained from the wheat expression database (<http://www.wheat-expression.com/>). Expression levels of *TaSPL14* homoeologs are presented according to the color scale, in which red color and white color represent high and low transcript abundance respectively. *TaSPL14-7A*, *TraesCS7A02G246500*; *TaSPL14-7B*, *TraesCS7B02G144900*; *TaSPL14-7D*, *TraesCS7D02G245200*.

Supplementary Figure 3. Relative expression level of *TaSPL14* in seedling leaves of wild type (WT) and three representative T₃ generation overexpression (OE) lines (OE-1–3). The values are presented as mean \pm SD. ** $P < 0.01$ (ANOVA) indicates a significant difference to the WT.

Supplementary Figure 4. Cis-elements prediction and promoter activity analysis of *TaSPL14-7A* haplotypes. (A) Predicted cis-elements in the promoter regions of *TaSPL14-7A*. Three haplotypes are formed by 7 SNPs and 2 InDels in the *TaSPL14-7A* promoter regions. Different cis-elements are shown in boxes with different colors. W-Box (TTGACY): WRKY transcription factor binding motif; CCAAT-box (CCAAT): CCAAT transcription factor binding motif; G-box (CTGGTC): light responsive element; MYB (AGCGG): MYB transcription factor binding motif; GRF (TTTCAGA): GRF transcription factor binding motif. (B) Promoter activity assays of *TaSPL14-7A* haplotypes. The promoter of each haplotype is cloned into the pGreenII 0800-LUC vector, and the promoter activity is measured according to the LUC/REN ratio. The values are presented as mean \pm SD. ** $P < 0.01$ (ANOVA) indicates a significant difference to the *Hap3-pro*.

1.2 Supplementary Tables

Supplementary Table 1. Primers used in this study.

Primers used for gene cloning and vector construction (5'-3')

HD, heading date; MD, maturity date; SL, spike length; SN, spikelet number per spike; PH, plant height; GN, grain number per spike; ETN, effective tiller number; TKW, thousand kernel weight; KL, kernel length; KW, kernel width; KT, kernel thickness. Data are means \pm SE. Uppercase letters and lowercase letters indicate extremely significant ($P < 0.01$) and significant differences ($P < 0.05$) between haplotypes respectively.
