

Figure S3: SAA1, CRP and LDHB are associated with melanoma disease progression. Serum expression of **(A)** C-reactive protein (CRP) (n=60), **(B)** serum amyloid A1 (SAA1) (n=58) and **(C)** lactate dehydrogenase B (LDHB) (n=58) by patients with stage III disease that developed stage IV disease, as measured by mass spectrometry. A two-tailed paired Student's *t*-test was used to determine statistical significance between stage III and stage IV samples. **, $P < 0.01$, ****, $P < 0.0001$
