

**Effects of dietary fibers or probiotics on functional constipation symptoms and roles of gut microbiota: a double-blinded randomized placebo trial**

**Supplemental materials**

**Table S1.** Changes of constipation symptoms over the intervention by group.

**Table S2.** Changes in biochemical parameters.

**Table S3.** Adverse events recorded in the study.

**Table S4.** The difference and ratio of relative genus abundance between intervention groups and the placebo group.

**Table S5:** Partial correlation between the 4-week change in *Bifidobacterium* abundance and changes in constipation symptoms by group.

**Table S6:** Partial correlations between changes of continuously changed bacterial genera abundance and changes in constipation symptoms.

**Table S7:** The top 10 KEGG pathways and top 10 modules based on PICSRUSt-2 functional profiling from the constantly changed genera.

**Table S8:** The top10 KEGG pathways and top10 modules based on PICSRUSt-2 functional profiling for the differential genera predicting responsiveness.

**Table S9:** Dietary and lifestyle counselling materials.

**Table S10:** Assessment and analyses details of gut microbiota.

**Figure S1** Study flow.

**Figure S2.** Microbiota diversity in each stage by group.

**Table S1. Changes of Constipation symptoms over the intervention by group <sup>a</sup>.**

Symptom	Placebo	Group A	P <sup>b</sup>	Group B	P <sup>b</sup>	Group C	P <sup>b</sup>	Group D	P <sup>b</sup>

Data are mean ± SD

<sup>a</sup> n= 50 for each group with the following exceptions: week 1 (group C: n = 49, placebo: n = 49), week 2 (group B: n = 49, group C: n = 47, placebo: n = 48), week 3 (group A: n = 49, group B: n = 49, group C: n = 47, placebo: n = 48), week 4 (group A: n = 49, group B: n = 49, group C: n = 47, placebo: n = 48).

<sup>b</sup> Wilcoxon rank-sum test was used for comparing changes from baseline to each visit time between each intervention group and placebo.

BMF, bowel movement frequency; BSS, Bristol stool scale score; DDS, Defecation difficulty score.

**Table S2. Changes in biochemical parameters**

Data were mean ± SD and median (interquartile range) for normal or non-normal distribution variable.

GLU, glucose; HDL-C, high density lipoprotein-cholesterol; LDL-C, low density lipoprotein cholesterol; TC, cholesterol; TG, triglyceride.

P values were determined by generalized estimating equations, adjusted for age, sex.

△ Changes from week 0 to week 4.

**Table S3. Adverse events recorded in the study.**

Adverse Event	Group A	Group B	Group C	Group D	Placebo
Slight dizziness	0	0	1	0	0
Acute gastroenteritis	0	0	0	0	1
Stomachache	1	0	1	1	0
Bloating	1	2	2	1	0
Farting increasing	1	2	1	1	0
Diarrhea	0	2	0	1	0
Tenesmus	2	1	0	0	0
Appetite decreased	0	0	0	1	2
Hemorrhoids aggravated	0	0	0	1	0

Data are the numbers of events

**Table S4. The difference and ratio of relative genus abundance between intervention groups and the placebo group.**

<sup>a</sup> The difference in the relative genus abundance between any intervention group and the placebo group was tested by using Wilcoxon rank-sum test. FDR-adjusted P values (Q value) were presented.

<sup>b</sup> The ratio of mean relative genus abundance between interventions group and the placebo group.

**Table S5. Partial correlation between the 4-week change in *Bifidobacterium* abundance and changes in constipation symptoms by group.**

Bacterial genera	Group	r			P value			FDR P value		
		BMF	BSS	DSS	BMF	BSS	DSS	BMF	BSS	DSS
g_Bifidobacterium	A	-0.124	-0.057	0.031	0.411	0.705	0.840	0.832	0.840	0.840

Partial spearman correlation was used adjusted for age and gender. Bold P value denoted that the correlation was significant. BMF, bowel movements frequency; BSS, Bristol stool scale score; DDS, degree of defecation straining.

**Table S7 The top 10 KEGG pathways and top 10 modules based on PICSRUSt-2 functional profiling from the constantly changed genera.**

Group	Pathway level2		Module	
	Description	Mean abundance	Description	Mean abundance
A	Global and overview maps	60008	Citrate cycle (TCA cycle, Krebs cycle)	858
	Carbohydrate metabolism	16300	Reductive citrate cycle (Arnon-Buchanan cycle)	777
	Amino acid metabolism	10594	Glycolysis (Embden-Meyerhof pathway), glucose => pyruvate	712
	Metabolism of cofactors and vitamins	6579	Histidine biosynthesis, PRPP => histidine	687
	Membrane transport	5694	Citrate cycle, second carbon oxidation, 2-oxoglutarate => oxaloacetate	675
	Energy metabolism	5410	Inosine monophosphate biosynthesis, PRPP + glutamine => IMP	640
	Translation	5129	Pentose phosphate pathway (Pentose phosphate cycle)	516
	Replication and repair	4296	Cobalamin biosynthesis, cobinamide => cobalamin	513
	Nucleotide metabolism	3579	C5 isoprenoid biosynthesis, non-mevalonate pathway	513
	Cellular community - prokaryotes	3024	Shikimate pathway, phosphoenolpyruvate + erythrose-4P => chorismate	512
B	Global and overview maps	59113	Glycolysis (Embden-Meyerhof pathway), glucose => pyruvate	979
	Carbohydrate metabolism	15334	F-type ATPase, prokaryotes and chloroplasts	736
	Amino acid metabolism	9499	Gluconeogenesis, oxaloacetate => fructose-6P	700
	Energy metabolism	6269	Histidine biosynthesis, PRPP => histidine	607
	Metabolism of cofactors and vitamins	6152	Reductive pentose phosphate cycle (Calvin cycle)	576
	Membrane transport	6102	Inosine monophosphate biosynthesis, PRPP + glutamine => IMP	540
	Translation	4773	Reductive citrate cycle (Arnon-Buchanan cycle)	514
	Replication and repair	4204	Pentose phosphate pathway (Pentose phosphate cycle)	512
	Signal transduction	4178	Uridine monophosphate biosynthesis, glutamine (+ PRPP) => UMP	500
	Nucleotide metabolism	3745	Shikimate pathway, phosphoenolpyruvate + erythrose-4P => chorismate	497
C	Global and overview maps	11409	Glycolysis (Embden-Meyerhof pathway), glucose => pyruvate	229
	Carbohydrate metabolism	3743	Gluconeogenesis, oxaloacetate => fructose-6P	165
	Amino acid metabolism	1634	Reductive pentose phosphate cycle (Calvin cycle)	156
	Energy metabolism	1236	Reductive pentose phosphate cycle, glyceraldehyde-3P => ribulose-5P	136
	Membrane transport	1204	F-type ATPase, prokaryotes and chloroplasts	130
	Metabolism of cofactors and vitamins	995	Formaldehyde assimilation, ribulose monophosphate pathway	120
	Translation	774	Pentose phosphate pathway (Pentose phosphate cycle)	108
	Replication and repair	680	Histidine biosynthesis, PRPP => histidine	96
	Nucleotide metabolism	635	Shikimate pathway, phosphoenolpyruvate + erythrose-4P => chorismate	92
	Lipid metabolism	547	Reductive citrate cycle (Arnon-Buchanan cycle)	90

D	Global and overview maps	3807	Glycolysis (Embden-Meyerhof pathway), glucose => pyruvate	68
	Carbohydrate metabolism	979	Inosine monophosphate biosynthesis, PRPP + glutamine => IMP	47
	Amino acid metabolism	636	Gluconeogenesis, oxaloacetate => fructose-6P	44
	Translation	387	Pentose phosphate pathway (Pentose phosphate cycle)	42
	Energy metabolism	371	F-type ATPase, prokaryotes and chloroplasts	41
	Membrane transport	369	Lysine biosynthesis, succinyl-DAP pathway, aspartate => lysine	41
	Metabolism of cofactors and vitamins	361	Glycolysis, core module involving three-carbon compounds	39
	Replication and repair	338	Uridine monophosphate biosynthesis, glutamine (+ PRPP) => UMP	39
	Nucleotide metabolism	278	Shikimate pathway, phosphoenolpyruvate + erythrose-4P => chorismate	37
	Signal transduction	231	Reductive pentose phosphate cycle (Calvin cycle)	36

For each intervention group, the constant changing genera from the soft clustering analysis were used to formulate the ASV's abundant tables. Based on the tables, PICRUSt2 software package (version v2.2.0-b) was used to predict the abundance enriched in the Kyoto Encyclopedia of Genes and Genomes (KEGG) module and pathways to infer microbial functional content, respectively.

**Table S8. The top10 KEGG pathways and top10 modules based on PICSRUSt-2 functional profiling for the differential genera predicting responsiveness.**

Group C	Global and overview maps	151634	Glycolysis (Embden-Meyerhof pathway), glucose => pyruvate	2209
	Carbohydrate metabolism	38916	F-type ATPase, prokaryotes and chloroplasts	1751
	Amino acid metabolism	25304	Histidine biosynthesis, PRPP => histidine	1616
	Metabolism of cofactors and vitamins	16928	Gluconeogenesis, oxaloacetate => fructose-6P	1562
	Membrane transport	16066	Inosine monophosphate biosynthesis, PRPP + glutamine => IMP	1478
	Energy metabolism	14995	Shikimate pathway, phosphoenolpyruvate + erythrose-4P => chorismate	1414
	Translation	12408	Citrate cycle (TCA cycle, Krebs cycle)	1378
	Replication and repair	10519	Lysine biosynthesis, succinyl-DAP pathway, aspartate => lysine	1343
	Nucleotide metabolism	9444	Reductive citrate cycle (Arnon-Buchanan cycle)	1328
	Signal transduction	8730	Uridine monophosphate biosynthesis, glutamine (+ PRPP) => UMP	1320
Group D	Global and overview maps	14851	Reductive citrate cycle (Arnon-Buchanan cycle)	219
	Carbohydrate metabolism	4318	Citrate cycle (TCA cycle, Krebs cycle)	214
	Amino acid metabolism	2913	Glycolysis (Embden-Meyerhof pathway), glucose => pyruvate	203
	Energy metabolism	1504	V/A-type ATPase, prokaryotes	184
	Membrane transport	1340	Pyruvate oxidation, pyruvate => acetyl-CoA	184
	Metabolism of cofactors and vitamins	1219	Citrate cycle, second carbon oxidation, 2-oxoglutarate => oxaloacetate	158
	Signal transduction	1193	Histidine biosynthesis, PRPP => histidine	138
	Translation	1016	Gluconeogenesis, oxaloacetate => fructose-6P	137
	Replication and repair	998	Inosine monophosphate biosynthesis, PRPP + glutamine => IMP	136
	Cellular community - prokaryotes	955	Dicarboxylate-hydroxybutyrate cycle	131

For each intervention group, the genera from the top 10 in each model with significant difference between the responders and the non-responders were used to formulate the ASV's abundant tables. Based on the tables, PICRUSt2 software package (version v2.2.0-b) was used to predict the abundance enriched in the Kyoto Encyclopedia of Genes and Genomes (KEGG) module and pathways.

**Table S9 Dietary and lifestyle counselling materials**

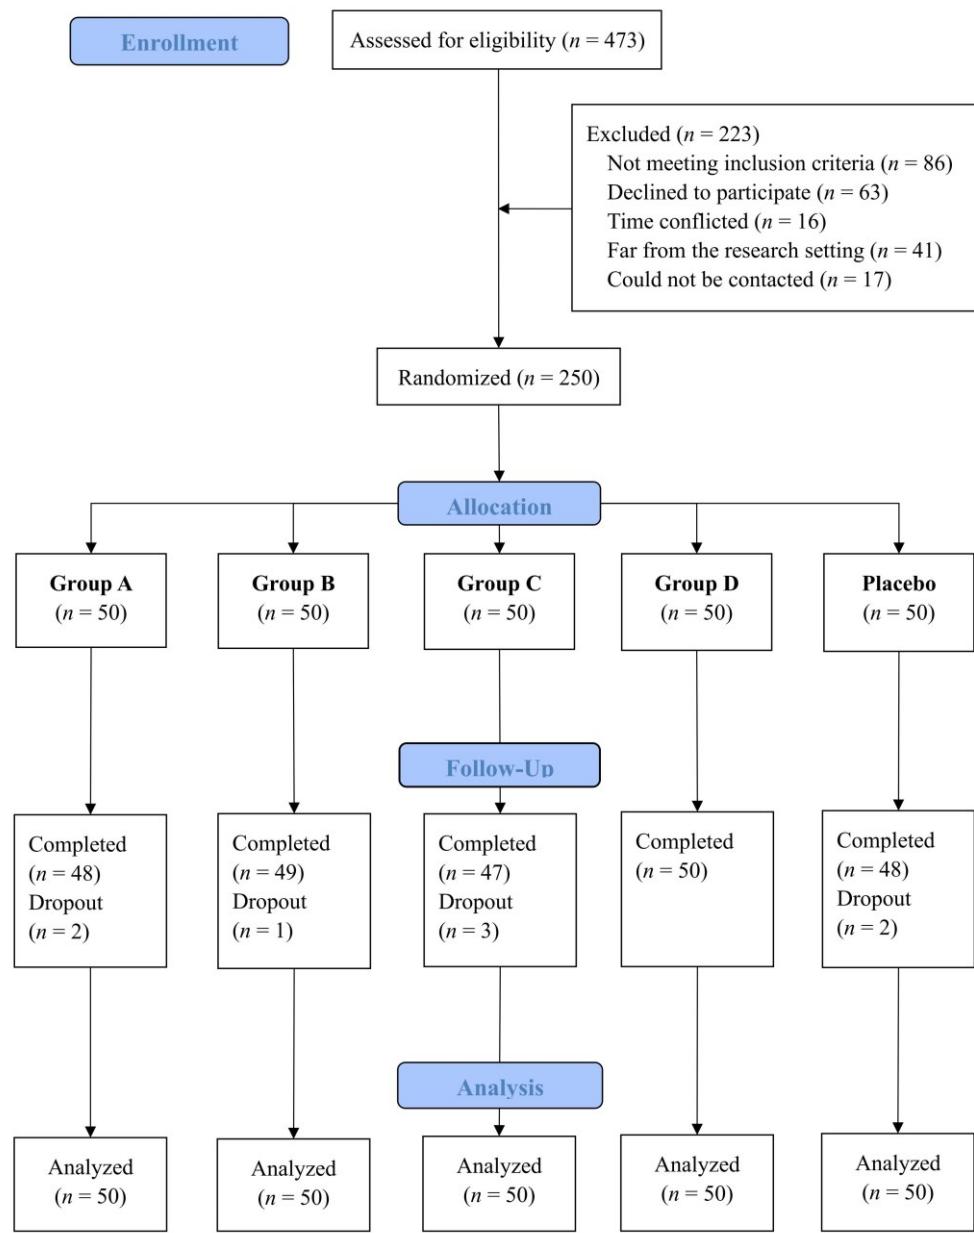

1. Core recommendations of dietary guidelines for the general population
(a) Eat a variety of foods, cereal based
(b) Be active to maintain a healthy body weight
(c) Eat plenty of vegetables, fruits, dairy, and soybeans
(d) Enjoy fish, poultry, eggs, and lean meats in moderate amounts
(e) Limit table salt, cooking oil, added sugar, and alcohol
(f) Develop healthy eating habits, avoid food waste
2. Increase water intake
Keep water intake between 1.5 and 2.0 L/d.
3. Regular exercise
Exercise 30~60 min/occasion, at least two times/week.
4. Keep a good bowel habit
Try defecation right after getting up in the morning or within two hours after breakfast. The squat defecation position would make defecation easier. In addition, try to avoid interruption by factors unrelated to defecation when going to the toilet and keep a good defecation habit.
5. Basic knowledge of prebiotics and probiotics.
Prebiotics are substances that can be selectively utilized by host microorganisms to bring health benefits, with dietary fiber being the most common one. The water-holding capacity of dietary fiber increases the faecal volume. Its fermentability increases the faecal weight and stimulates defecation by optimizing the microflora, thereby relieving constipation. Dietary fiber promotes the growth of intestinal probiotics to facilitate the maintain of intestinal immune function.
Probiotics are live microorganisms that, when ingested in adequate amounts, confer health benefits on the host. The functions of probiotics include maintaining the normal intestinal flora and inhibiting pathogenic bacteria, improving and maintaining the intestinal function, involved in the nutrient metabolism of the body, regulating the immune system function, regulating endocrine system, and neuropsychiatric health.

**Table S10 Assessment and analyses details of gut microbiota**

Content	Description
16S rRNA sequencing	DNA was extracted from stool samples (200 mg) using QIAamp DNA Stool Mini Kit (Qiagen, Hilden, Germany) following the manufacturer's instructions, with additional homogenized steps in a bead beater (FastPrep, Thermo Electron Co, Boston, Massachusetts, USA). The V3-V4 hypervariable regions of the bacteria 16S rRNA gene were amplified with primers 338F (5'-ACTCCTACGGGAGGCAGCAG-3') and 806R (5'-GGACTACHVGGGTWTCTAAT-3') by thermocycler PCR system (GeneAmp 9700, ABI, USA). The purified amplicons were pooled in equimolar and paired-end sequenced (2 × 300) using an Illumina MiSeq platform (Illumina, San Diego, California, USA) according to the standard protocols by Majorbio Bio-Pharm Technology Co. Ltd. (Shanghai, China).
Soft clustering and functional annotation	To identify changing trends of gut microbiota in each intervention group over three stages (week 0, 2, and 4), soft clustering analysis was used for its accuracy and robustness to noise and less information loss using the fuzzy c-means algorithm with time-course data by applying the R package “ <i>Mfuzz</i> ” <sup>1,2</sup> . For each group over the three stages, several clusters were identified, including continuous increase, continuous decrease, increase-decrease, decrease-increase, and no obvious change with selected parameters (minimum SD = 0, membership value = 0.65, and c optimal = 8). For each intervention group, the mean abundance values of genera that fit the continuous increase or decrease clusters were subsequently used to calculate log2 fold changes from week 0 to week 2 or 4 per predefined research interests. Herein the log2 fold changes of genera were presented only if they were exclusively identified in the intervention groups but not in the placebo group. For each intervention group, the constant changing genera from the soft clustering analysis were used to formulate ASV's abundant tables. Based on the tables, PICRUSt2 (version v2.2.0-b) was used to predict the abundance enriched in the Kyoto Encyclopedia of Genes and Genomes (KEGG) module and pathways to infer microbial functional content, respectively. The correlations between the changes in continuously increased/decreased bacterial genera and the changes in constipation symptoms (BMF, BSS, DDS) were analyzed by spearman partial rank correlation. Age and sex-adjusted mean general change levels of particular interest were presented by the relief level of constipation symptom, using general linear model in the R package “ <i>emmeans</i> ”.

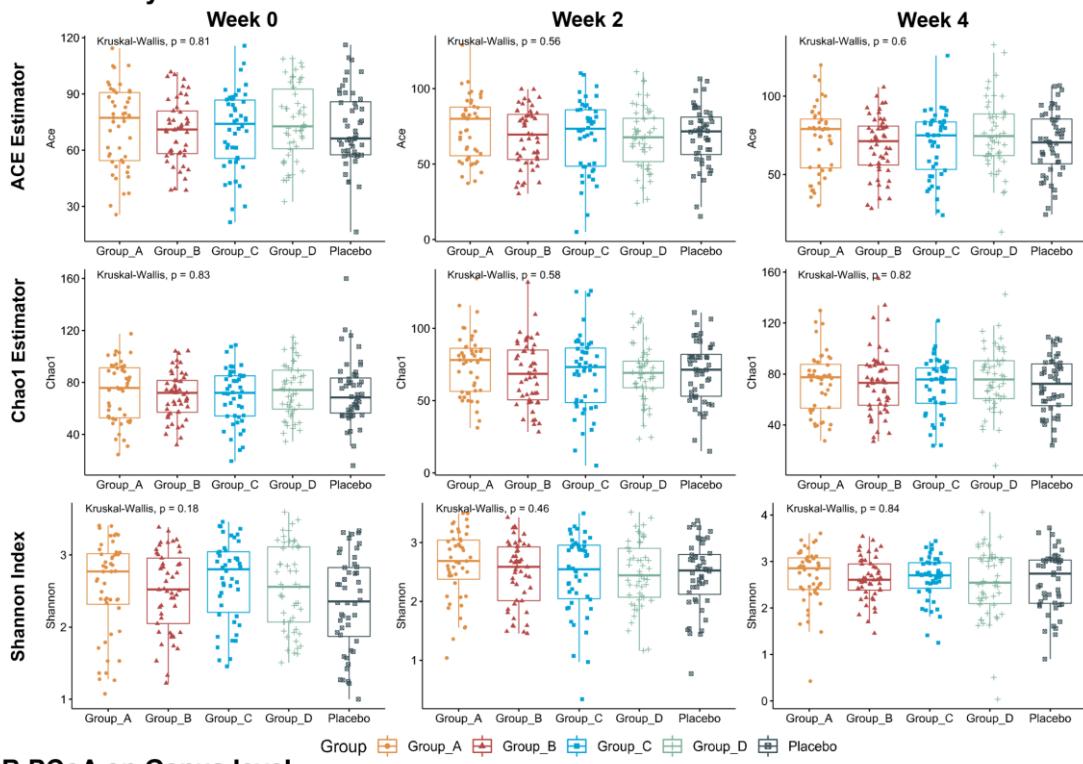

Random forest models and functional annotation	<p>In order to explore the predictive performance of microbiota profiles in responders and non-responders in each intervention group, we defined responders for three scenarios: 1) <math>\geq 1</math> increase in BMF; 2) <math>\geq 1</math> increase in BSS score; 3) <math>\geq 1</math> decrease in DDS. Random forests analysis was used to determine genus-level gut microbiota patterns predicting responders using the R package “<i>caret</i>”. After removing the variable with the variance of 0, 75% of the samples were randomly selected as the training set and the hold-out set was used to evaluate classification accuracy with 500 repetitions. We calculated the area under the receiver operating characteristics curve (AUC) with the cross-validation error with 10000 bootstraps for confidence intervals using the R package “<i>pROC</i>”. The differences between responders and non-responders for the top 10 genera in each model were compared using Wilcoxon signed-rank test. For each intervention group, the genera from the top 10 in each model with significant differences between the responders and the non-responders were used to formulate KEGG module and pathways.</p>
