

Figure 7 Source data 2: GAC interaction with TgActin filaments. (a) Coomassie-stained gel analysing full-length TgGAC (GAC-FL) remaining in supernatant or sedimenting upon centrifugation at 100'000 g. S: Supernatant. P: Pellet. (b) Coomassie-stained gel analysing truncated TgGAC (TgGAC₁₋₁₁₁₄ and TgGAC₁₋₆₁₇) remaining in supernatant or sedimenting upon centrifugation at 100'000 g. S: Supernatant. P: Pellet. Key molecular weight markers indicated in kDa.
