

## **Epidemiology and Infection**

### Epidemiology of Invasive Meningococcal Disease Worldwide From 2010–2019: A Literature Review

Carmen Pardo de Santayana, Myint Tin Tin Htar, Jamie Findlow, Paul Balmer

## **Supplementary Material**

### **Search Strategy**

Searches were restricted to publications and reports published between 1 January 2010 and 30 June 2020. The grey literature search was considered primary, and was undertaken on websites reporting subnational, national, and multinational IMD data that were previously known to the authors. Relevant IMD data within reports were identified by internal document searches of “meningococcal” and “meningitidis” in the corresponding language or review by native-speaking colleagues of the authors. Once identified, relevant report sections were translated to English using Google translation and Yandex® for text within figures and images.

The PubMed search terms were as follows: (((("Meningitidis"[Title/Abstract] OR "Meningo"[Title/Abstract] OR "Meningitides"[Title/Abstract] OR "neisseria meningitidis"[Title/Abstract]) NOT ("adaptive clinical trial"[Publication Type] OR "case rep orts"[Publication Type] OR "clinical study"[Publication Type] OR "clinical trial"[Publication Type] OR "clinical trial protocol"[Publication Type] OR "clinical trial, phase i"[Publication Type] OR "clinical trial, phase ii"[Publication Type] OR "clinical trial, phase iii"[Publication Type] OR "clinical trial, veterinary"[Publication Type] OR "controlled clinical trial"[Publication Type] OR "guideline"[Publication Type] OR "systematic review"[Publication Type] OR "randomized controlled trial"[Publication Type] OR "randomized controlled trial, veterinary"[Publication Type] OR "meta analysis"[Publication Type] OR "editorial"[Publication Type] OR "equivalence trial"[Publication Type] OR "observational study, veterinary"[Publication Type])) NOT ("econo"[Title/Abstract] OR "cost"[Title/Abstract] OR "cost effective"[Title/Abstract])) AND 2011/01/01:2020/06/15[Date - Publication] AND ("french"[Language] OR "italian"[Language] OR "english"[Language] OR "portuguese"[Language] OR "spanish"[Language]) AND ("human s"[All Fields] OR "humans"[MeSH Terms] OR "humans"[All Fields] OR "human"[All Fields]). Languages were restricted to English, Spanish, French, Italian, and Portuguese.

### **Data Review and Inclusion and Exclusion Criteria**

Grey literature reports and publications were excluded if (1) they only contained IMD data for cases occurring before 2010, (2) they reported only the total number of IMD cases, or (3) data were not extractable. No inclusion or exclusion criteria were applied regarding diagnostic or confirmatory methods, or the case definition used.

Where multiple grey literature reports contained the same data for the same period, earlier reports and reports for the smaller geographical area(s) were excluded. For example, subnational reports were only used in the absence of national or multinational reports, and national reports were only used in the absence of multinational reports, with the exception of Brazil and Chile, where national reports were used when they provided the most accurate and complete data sets. Latin American countries reporting fewer than five IMD cases for any single year in the Sistema Regional de Vacunas II (SIREVA II) reports were also excluded.

Publications identified from the PubMed search were reviewed by two authors for application of inclusion and exclusion criteria. Publications reporting data from single-centred studies or specific outbreaks; meta-analyses; systematic reviews; clinical trials; case reports; models, simulations, or

extrapolations; guidelines; randomized trials; editorials; equivalence trials; nonhuman studies; health economic impact studies; vaccination policy studies; or vaccine effectiveness studies were excluded, as were publications that only contained data identical to data from grey literature reports. These criteria were applied stepwise in reviews of the title, abstract, and full text.

### **Data Extraction and Collection**

The following data were extracted from grey literature reports and publications meeting the inclusion criteria: number of cases and/or percentage of IMD per serogroup for all ages, IMD (all serogroups) incidence (reported as N/10000) for all ages and per age group, number of cases and/or percentage of IMD per serogroup by age group, and the period and geographical area. Extracted data are consistent with those published at the date of initial download.

### **Analysis**

Analyses of incidence and serogroup distribution of IMD were descriptive. For analysis and interpretation, subnational and national data were taken into account individually by country, with the exception of Europe and the African meningitis belt (24 countries, detailed below). Where only case numbers were available, serogroup distribution was calculated using Microsoft Excel.

### **African Meningitis Belt Countries [1]**

Benin, Burkina Faso, Burundi\*, Cameroon, Central African Republic, Chad, Côte d'Ivoire, Democratic Republic of Congo, Ethiopia, Gambia, Ghana, Guinea, Guinea Bissau\*, Kenya\*, Mali, Mauritania, Niger, Nigeria, Senegal, Sierra Leone\*, South Sudan, Sudan, Tanzania\*, Togo, Uganda\*

\*Did not report IMD serogroup data during 2010–2019

IMD=invasive meningococcal disease; NG=nongroupable.

A dash indicates no incidence data were available.

\*Percentages were calculated from available data.

†No age-stratified data specific for W, Y, NG, or other serogroups were available in 2010 or 2011, so percentages were calculated using the total number of serogroup B and C cases as the denominator.

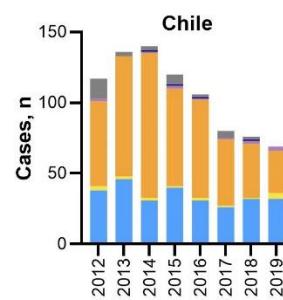

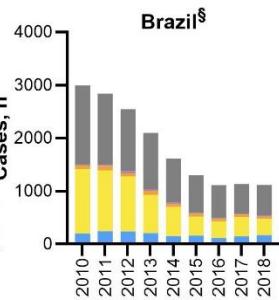

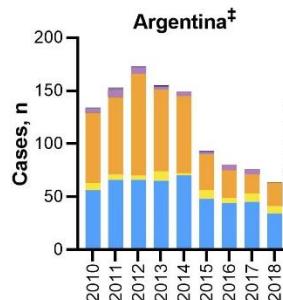

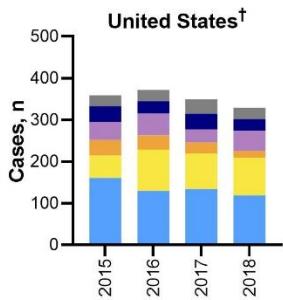

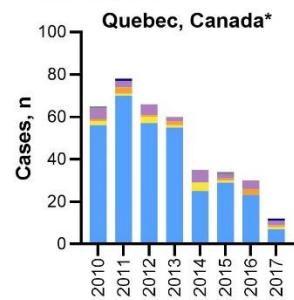

‡All-ages serogroup data were sourced from Ministério da Saúde do Brasil [2] and included cases with ‘ignored serogroups’, which are shown here as other/NG cases. Age-stratified data were sourced from regional SIREVA II reports for 2010–2016 [10] and Adolfo Lutz Institute reports for 2017–2018 [14,15].

§2012 age group serogroup data only span through to week 43; single C isolates were reported for the <1 y and 15–29 y age groups.

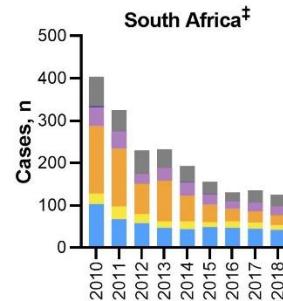

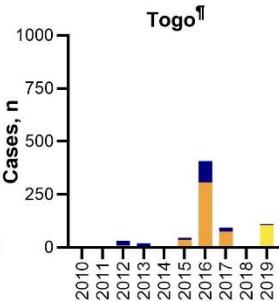

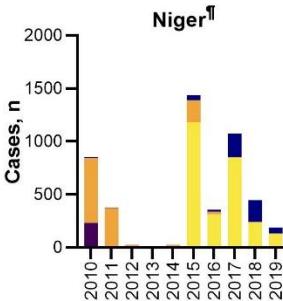

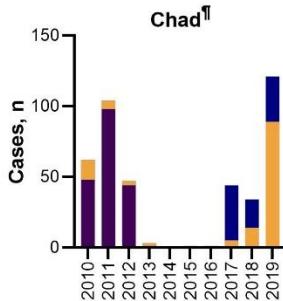

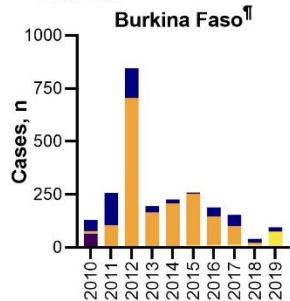

¶For all-ages data, other/NG cases include serogroup X and E isolates, NG isolates, and laboratory confirmed cases that did not undergo serogrouping; for age-stratified data, other/NG cases additionally include probable cases (ie, clinically compatible illnesses that were not laboratory confirmed).

**Supplementary Figure S1. Number of cases of invasive meningococcal disease (A) worldwide and (B) in selected European countries by serogroup from 2010 to 2019 (countries with available data) [1,2,4-13,16-25].** Data from China, Colombia, Dominican Republic, Japan, Kuwait, Mozambique, Paraguay, South Korea, Uruguay, and Venezuela are not shown. For Russia only, serogroups are shown as percentages of total cases. \*2017 data are from January to June. †Other represents all other cases, including serogroup A. ‡NG represents NG isolates as well as cases for which a serogroup was not determined. §NG represents cases with unknown or ignored serogroup. ¶2011 data only span through Week 47. #NG represents all other cases, including serogroup A. ||Other/NG represents all other cases, including serogroup A. NG=nongroupable.
