Title: Supplementary data 1.

Description: RiboVD library design and sequenced coverage.

Title: Supplementary data 2.

Description: Table of expression constructs and information on proteins screened.

Title: Supplementary data 3.

Description: RiboVD selection results. Information is provided on bait protein used, confidence of interaction, peptide found, annotation on host protein, viral species and viral family.

Title: Supplementary data 4.

Description: RiboVD motif benchmarking set.

Title: Supplementary data 5.

Description: RiboVD protein-protein interaction benchmarking set.

Title: Supplementary data 6.

Description: Co-occurrence of viral SLiMs targeting human bait-bait pairs.

Title: Supplementary data 7.

Description: GO term enrichment analysis of expanded host-virus network.

Title: Supplementary data 8.

Description: Overview of peptides used for affinity measurements together with resulting affinity data.

Title: Supplementary data 9.

Description: Details of constructs used for cell based experiments.

Title: Supplementary data 10.
Description: AP-MS data.
