

Supplemental Table 2

Multivariable logistic regression using binary *etx* status as outcome confirms MS is independently associated with *etx* status, adjusting for sex and treatment.

	<i>Characteristic</i>	<i>OR¹</i>	<i>95% CI²</i>	<i>p-value</i>
Group	HC	—	—	
	MS	25.2	4.46, 218	<0.001
Gender	Female	—	—	
	Male	0.68	0.14, 2.88	0.6
Treatment	No treatment	—	—	
	Treatment	0.29	0.04, 1.52	0.2

1 OR = Odds Ratio, 2 CI = Confidence Interval
