

Supplementary Figure S3. The spatiotemporal expression patterns of ATP2A2, RyR2, NAP1L1, and PLXNB2 during preimplantation embryonic development in mice. (A and B) IF staining revealed the localization of RyR2 and ATP2A2 in the cytoplasm. **(C)** NAP1L1 was localized to the cytoplasm and had a weak signal in the nucleus. **(D)** PLXNB2 was localized to the cell membrane.
