(A,C,D) Unstimulated or unstained CD8<sup>+</sup> T-cells were used as controls to set the gate for IL-21, IL-23R, TCF1, BCL6, CD27 and CD107a staining in CD8<sup>+</sup> T-cells stimulated with microspheres immobilized with anti-CD3, anti-CD28 (Sample). (B) CD8<sup>+</sup> T-cells from C57BL/6 mice stimulated under Tc17 condition with anti-CD3, anti-CD28 were used as a control for IL-17eGFP gating in similarly stimulated CD8<sup>+</sup> T-cells (sample) from IL-17A-eGFP reporter mice.
