

S11 Fig. S-F binding sites in the *A. baumannii* 70S ribosome (continued on next page).

C

S11 Fig. S-F binding sites in the *A. baumannii* 70S ribosome. (A) Two binding sites were found in the P-site 70S: one in the 30S (red, site 1) and another in the 50S (blue, site 2). (B) In the 70S with E-site tRNA, no S-F sites were found. This is likely due to rotation of the 30S head and occlusion of the 50S site by the de-acylated end of the tRNA. (C) In the empty 70S, bound S-F was only detected in the 50S site (blue, site 2). 16S rRNA, *E. coli* numbering.
