

Supplemental Figure S5: No changes in immunoreactivity to bacterial products between *Fxr*KO and DKO mice. (A-B) Male WT (n=5), *Tlr5*KO (n=5), *Fxr*KO (n=16), and DKO (n=18) mice were aged for 16 months and analyzed for serum immunoreactivity to (A) lipopolysaccharide (LPS) and (B) flagellin by ELISA. Results are expressed as means \pm SEM.
